The authors have withdrawn this manuscript owing to having been informed by the UK Biobank Research Development Team that the use of a subset of prescription data in our analyses does not comply with the Control of Patient Information (COPI, 2020) notice.

Specifically, 'these prescription data could only be used for the purpose of COVID-19 research'. While we have analyzed the impact of these prescription drugs on COVID-19 mortality, as contained in the present manuscript, any additional analyses, as also contained within, appear to be incongruent with the COPI notice.

We hence abide by the request of UK Biobank Research Development Team to withdraw the entire publication. We apologize for any inconvenience this may cause. It should be noted that the scientific content, methods and validity of the results in the entire publication remain unaffected by both the request and the subsequent retraction.

Therefore, the authors do not wish this work to be cited as reference for the project. If you have any questions, please contact the corresponding author.
