Table S1. Descriptive statistics and percentiles of flame-retardant^a measurements for firefighters (n= 86) and office workers (n= 84)

Abbreviations: LOD = Limit of Detection; DF = Detection Frequency; GM = Geometric mean; GSD = geometric standard deviation

^a2,2',4,4'-Tetrabromodiphenyl ether (OH-BDE 47) and 1,3,5-Tribromo-2-(2,4-dibromophenoxy)benzene (OH-BDE 100) were also quantified but not detected in participant's samples.

Table S2. $\beta(95\%CI)$ and percent change (95% confidence intervals) in TSH
levels for each doubling of exposure of continuous BDCPP, BCEP and DBuP
in the full cohort in adjusted ^a OLS regression models

			Percent change		
	Model	β(95%Cl)	(95%CI)		
Full cohort					
	BDCPP	-0.006 (-0.110,0.098)	-0.408 (-7.323,7.024)		
	BCEP	-0.069 (-0.161,0.024)	-4.657 (-10.572,1.650)		
	DBuP	-0.015 (-0.137,0.107)	-1.033 (-9.035,7.673)		
Firefighters					
	BDCPP	0.050 (-0.150,0.251)	3.548 (-9.875,18.972)		
	BCEP	-0.127 (-0.297,0.043)	-8.418 (-18.610,3.049)		
	DBuP	0.018 (-0.195,0.231)	1.257 (-12.658,17.388)		
Office worke	ers ^b				
	BDCPP	-0.022 (-0.141,0.098)	-1.491 (-9.325,7.020)		
a Madala adjusted for any and lar (areatining) values helevel OD replaced with					

^a Models adjusted for age and log(creatinine) values below LOD replaced with LOD/sqrt(2); ^b Among office workers only BDCPP had DF >70% to use in linear models.

Figure S1. Median and 95th percentiles of flame retardants measured in urine (ug/g-creatinine) from 2014-2015 WFBC firefighters and office workers compared to 2013-2014 NHANES adult women (ages 18 to 65) for compounds with at 70% DF among firefighters of the WFBC.
