

Transmission type	Pre-lockdown	Post-lockdown
Household	7	35
Non-household	26	53
Family	81	365
Non-family	71	143
Imported	126	303
Non-imported	61	292

Table S7 Numbers of six types of transmission events: attributable to household contact; attributable to non-household contact; between family members; between non-family members; imported (primary and secondary cases infected in different cities); non-imported (primary and secondary cases infected in the same city). Contact type, relationship, and infection location data were not available for all case pairs, so the totals for household/non-household (121), family/non-family (660), and imported/non-imported (782) are different from one another and less than the total number of case pairs (873).
