**Table S2. Sliding window haplotypes of 2-6 SNVs in length meeting a threshold of  $5 \times 10^{-5}$ .** First marker = first SNV defining the haplotype; CHR =

chromosome; POS = position; Block = block number; Markers Used = combined markers defining the haplotype; Haplotype = haplotype sequence;  
EM Freq = haplotype frequency within the affected population; Case = haplotype frequency within patients diagnosed at  $\leq 45$  years of age;  
Control = haplotype frequency within patients at  $> 45$  years-of-age; P =  $\chi^2$  p value.
