

## List of supplementary tables

Supplementary Table 1: Sample demographics and descriptive variables (weighted)	2
Supplementary Table 2a: Regression analyses of co-occurrence of sleep disorders and psychotic experiences at baseline (T0) – weighting method A	3
Supplementary Table 2b: Regression analyses of co-occurrence of sleep disorders and psychotic experiences at baseline (T0) – weighting method B	4
Supplementary Table 3a: Regression analyses of whether sleep disorders at baseline predict onset of psychotic experiences at 12 months – weighting method A	5
Supplementary Table 3b: Regression analyses of whether sleep disorders at baseline predict onset of psychotic experiences at 12 months – weighting method B	6
Supplementary Table 4a: Regression analyses of whether sleep disorders at baseline predict persistence of psychotic experiences at 12 months – weighting method A	7
Supplementary Table 4b: Regression analyses of whether sleep disorders at baseline predict persistence of psychotic experiences at 12 months – weighting method B	8
RQ4a: Regression analysis of whether remission of sleep problems predicts remission of psychotic experiences (weighted method A):	9
RQ4a: Regression analysis of whether remission of sleep problems predicts remission of psychotic experiences (weighted method B):	9

Supplementary Table 1: Sample demographics and descriptive variables (weighted)

	Baseline n = 11830	12-month follow-up n = 4910		
<b>Descriptive statistics</b>				
Age (months) – mean (SE)	119.2 (0.3)	132.2 (0.5)		
Gender – male % (SE)	51.13 (0.1)	51.04 (0.9)		
Ethnicity % (SE)				
White	52.34 (5.6)	59.48 (6.3)		
Black	13.31 (2.5)	7.61 (1.6)		
Hispanic	23.83 (6.2)	22.50 (6.7)		
Asian	3.61 (0.9)	4.02 (0.9)		
Other	6.89 (1.0)	6.40 (1.3)		
Socioeconomic status scale – mean (SE)	0.56 (0.1)	0.47 (0.1)		
Child IQ – mean (SE)	9.74 (0.1)	10.03 (0.1)		
Neighbourhood deprivation percentile – mean (SE)	43.49 (3.8)	40.5 (3.9)		
Family conflict scale – mean (SE)	2.52 (0.1)	2.45 (0.06)		
Stimulant medication prescribed – % (SE)	6.41 (<0.0)	7.00 (<0.0)		
PQ-BC total – mean (SE)	2.74 (0.3)	1.82 (0.2)		
SDSC total – mean (SE)	36.78 (0.3)	36.59 (0.3)		
<b>Derived variable counts</b>				
Sleep disorders present ( $\geq 39$ cut off on SDSC) – % (SE)	31.71 (1.5)	29.15 (1.6)		
Sleep disorders new onset ( <i>absent at baseline, present at follow up</i> ) – % (SE)		9.56 (0.1)		
Sleep disorders persisting ( <i>present at both baseline and follow up</i> ) – % (SE)		19.50 (1.6)		
Sleep disorders remitting ( <i>present at baseline, absent at follow up</i> ) – % (SE)		10.48 (0.8)		
Psychotic experiences present ( $\geq 1$ on PQ-BC total) – % (SE)	63.08 (2.6)	48.25 (2.8)		
Psychotic experiences new onset – % (SE)		9.24 (0.9)		
Psychotic experiences persisting – % (SE)		29.01 (3.0)		
Psychotic experiences remitting – % (SE)		24.51 (1.1)		
<b>Cross tabulation (sleep disorders vs psychotic experiences, % prevalence)</b>				
		Psychotic experience onset		
<b>Onset (absent at baseline, present at follow up)</b>			No	Yes
	Sleep disorder onset	No	82.10	8.34
		Yes	8.66	0.90
		Psychotic experience persisting		
<b>Persistence (present at baseline and follow up)</b>			No	Yes
	Sleep disorder persisting	No	51.17	29.33
		Yes	9.84	9.66
		Psychotic experience remitting		
<b>Remission (present at baseline, absent at follow up)</b>			No	Yes
	Sleep disorder remission	No	67.70	21.81
		Yes	7.77	2.71

SDSC = Sleep Disorder Scale for Children; PQBC = Prodromal Questionnaire – Brief Child version; SE = standard error;

	IQ	0.969	0.94, 0.99	0.016	
	Family conflict	1.007	0.97, 1.05	0.717	
	Stimulant medication	1.406	1.06, 1.86	0.018	

persist = above cut off at T0 and T1; SDSC = Sleep Disorder Scale for Children; PQBC = Prodromal Questionnaire – Brief Child version; CI = confidence intervals; AIC = Akaike information criterion.

**RQ4a: Regression analysis of whether remission of sleep problems predicts remission of psychotic experiences (weighted method A):**

Remission of sleep disorder symptoms was not a significant predictor of remission of psychotic experiences (OR=1.041,  $p=0.588$ , 95% CI 0.80, 1.35,  $p=0.766$ , AIC=5241) in the uncontrolled model, therefore the analysis with control variables was not carried out.

**RQ4a: Regression analysis of whether remission of sleep problems predicts remission of psychotic experiences (weighted method B):**

Remission of sleep disorder symptoms was not a significant predictor of remission of psychotic experiences (OR=1.011,  $p=0.588$ , 95% CI 0.79, 1.29,  $p=0.929$ ) in the uncontrolled model, therefore the analysis with control variables was not carried out.
