

## Supplementary Materials

Table S1. Scanning parameters in OATS.

<b>T1-weighted MRI</b>								
Scan site	Manufacturer	Scanner	Acquisition matrix size (mm <sup>3</sup> )	Voxel size (mm <sup>3</sup> )	TR (ms)	TE (ms)	TI (ms)	FA (degree)
New South Wales	Philips – 1.5T	Scanner 1	256×256×190	1×1×1	5.7	2.6	780	8
New South Wales	Philips - 3T	Scanner 2	256×190×256	1×1×1	5.8	2.6	780	8
Victoria	Siemens - 1.5T	Scanner 3	176×216×256	1×1.5×1	1530	3.2	780	8
Queensland	Siemens - 3T	Scanner 4	208×240×256	1×1×1	2300	3.0	900	9
Victoria	Siemens - 3T	Scanner 5	208×240×256	1×1×1	2300	3.0	900	9
<b>T2-weighted FLAIR</b>								
New South Wales	Philips – 1.5T	Scanner 1	256×256×133	0.5×0.5×3.5	11000	110	2800	90
New South Wales	Philips - 3T	Scanner 2	198×256×256	0.6×1×1	4800	278.9	1650	90
Victoria	Siemens - 1.5T	Scanner 3	184×230×150	0.9×0.9×3	10000	99	2500	120
Queensland	Siemens - 3T	Scanner 4	182×224×165	0.7×0.7×3.3	9000	87	2500	150
Victoria	Siemens - 3T	Scanner 5	208×256×132	0.4×0.4×3.3	9000	84	2500	150

Notes. TR: repetition time; TE: echo time; TI: inversion time; FA: flip angle.

Notes. Values of  $\beta$ , SE, P,  $P_{adj}$  in the analysis with and no *APOE* were presented in the table. Brain soft tissue (labelled as BrainSegVolNotVent in FreeSurfer). Asterisks represent statistical significance when using linear mixed models ( $P < 0.05$ ). SE: standard error.  $P_{adj}$ : corrected for False Discovery Rate. MAS: Sydney Memory and Ageing Study; OATS: Older Australian Twins Study.

**(A) Discovery sample (UK Biobank)**

**Figure S1. Analytic sample derivation of discovery sample and replication sample.** In each dataset, there were two analyses undertaken: parental lifespan analysis and longevity-PRS analysis. In each analysis, association tests were performed with brain volumes and WMH. (A) Discovery sample. In the parental lifespan analysis, only participants having their parental age at death data and brain volume (or WMH) data were included. After excluding brain metrics outliers (scale (metrics) > 3), the final analysis included 16796 participants. Similarly, in the longevity-PRS analysis, only participants having longevity-PRS data and brain volume (or WMH) data were included. After excluding brain metrics outliers (scale (metrics) > 3), the final analysis included 18606 participants. (B) Replication sample. Using the same procedure as used in the discovery sample, the final analysis included 768 participants in the parental lifespan analysis and 773 participants in the longevity-PRS analysis.

MAS: Sydney Memory and Ageing Study; OATS: Older Australian Twins Study.
