Abbreviations: AD = Alzheimer's disease, MCI = mild cognitive impairment, MMSE = Mini-mental state examination, EF = executive functions, AMB = aberrant motor behaviors.

Data are standardized estimated annual  $\beta$  [95% confidence interval] corrected for sex, age, and education.

<sup>a</sup>  $p<0.05$ .

<sup>b</sup>  $p<0.05$  after correcting for false discovery rate.

<sup>#</sup> No patients with MCI and hallucinations at baseline had follow-up assessments available.
