

SUPPLEMENTARY MATERIAL

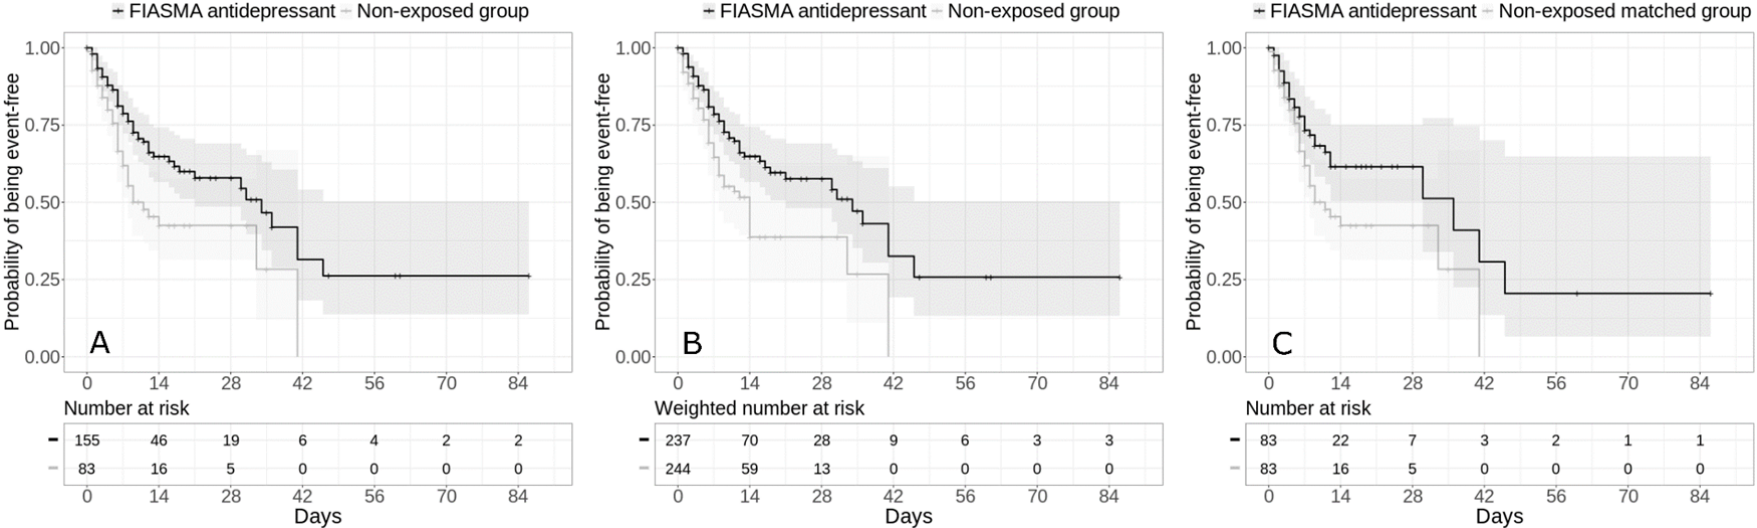

Supplementary Text

Variable assessment

We obtained the following data for each patient at the time of the hospitalization: sex; age, which was categorized into 4 classes based on the OpenSAFELY study results[20] (i.e. 18-50, 51-70, 71-80, 81+); hospital, which was categorized into 4 classes following the administrative clustering of AP-HP hospitals in Paris and its suburbs based on their geographical location (i.e., AP-HP Centre – Paris University, Henri Mondor University Hospitals and at home hospitalization; AP-HP Nord and Hôpitaux Universitaires Paris Seine-Saint-Denis; AP-HP Paris Saclay University; and AP-HP Sorbonne University); obesity, which was defined as having a body mass index higher than 30 kg/m² or an ICD-10 diagnosis code for obesity (E66.0, E66.1, E66.2, E66.8, E66.9); self-reported current smoking status; number of medical conditions associated with severe COVID-19 [20–23], based on ICD-10 diagnosis codes, including diabetes mellitus (E11), diseases of the circulatory system (I00-I99), diseases of the respiratory system (J00-J99), neoplasms (C00-D49), and diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism (D5-D8); and any medication prescribed according to compassionate use or as part of a clinical trial (e.g. hydroxychloroquine, azithromycin, remdesivir, tocilizumab, sarilumab, or dexamethasone). To take into account possible confounding by indication bias for psychotropic medications, we recorded whether patients had any current diagnosis of substance use disorder (F10-F19), psychotic disorder (F20-F29), mood or anxiety disorder (F30-F48), delirium or dementia (F05, R41.0 and G31.0), or any other psychiatric disorder (F01-F04, F06-F09 and F50-F99) based on ICD-10 diagnosis codes, and whether they were prescribed any antidepressant, mood stabilizer, benzodiazepine or Z-drug, or antipsychotic medication.

All medical notes and prescriptions are computerized in Greater Paris University hospitals. Medications including their dosage, frequency, date, and mode of administration were identified from medication administration data or scanned hand-written medical prescriptions, through two deep learning models based on BERT contextual embeddings [43], one for the medications and another for their mode of administration. The model was trained on the APmed corpus [44], a previously annotated dataset for this task. Extracted medications names were then normalized to the Anatomical Therapeutic Chemical (ATC) terminology using approximate string matching.

Supplementary Figure 1. Kaplan-Meier curves for the composite endpoint of intubation or death in the full sample crude analysis (N=231) (A), in the full sample analysis with IPW (N=231) (B), and in the matched analytic sample using a 1:1 ratio (N=166) (C) among patients with mental disorder hospitalized for severe COVID-19 and receiving a FIASMA *versus* a non-FIASMA antidepressant at baseline.

The shaded areas represent pointwise 95% confidence intervals.

Supplementary Table 1. Associations of baseline clinical characteristics with the composite endpoint of intubation or death in the cohort of adult patients with mental disorder who had been admitted to AP-HP hospitals for severe COVID-19.

^a Defined as having a body-mass index higher than 30 kg/m² or an International Statistical Classification of Diseases and Related Health Problems (ICD-10) diagnosis code for obesity (E66.0, E66.1, E66.2, E66.8, E66.9).

^b Current smoking status was self-reported.

^c Assessed using ICD-10 diagnosis codes for diabetes mellitus (E11), diseases of the circulatory system (I00-I99), diseases of the respiratory system (J00-J99), neoplasms (C00-D49), diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism (D5-D8), frontotemporal dementia (G31.0), peptic ulcer (K27), diseases of liver (K70-K95), hemiplegia or paraplegia (G81-G82), acute kidney failure or chronic kidney disease (N17-N19), and HIV (B20).

^d Assessed using ICD-10 diagnosis codes for mental and behavioural disorders due to psychoactive substance use (F10-F19).

^e Assessed using ICD-10 diagnosis codes for psychotic disorders (F20-F29).

^f Assessed using ICD-10 diagnosis codes for mood and anxiety disorders (F30-F48).

^g Assessed using ICD-10 diagnosis codes for delirium or dementia (F05, R41.0 and G31.0).

^h Assessed using ICD-10 diagnosis codes for other psychiatric disorders (F01-F04, F06-F09 and F50-F99).

ⁱ Any medication prescribed as part of a clinical trial or according to compassionate use (e.g., hydroxychloroquine, azithromycin, remdesivir, tocilizumab, sarilumab, or dexamethasone).

^j Included lithium or antiepileptic medications with mood stabilizing properties.

* Two-sided p-value is significant (p<0.05).

Abbreviations: HR, hazard ratio, CI confidence interval.

Supplementary Table 2. Backward stepwise regression models.

Step 1	AIC
Delirium or dementia, Any antidepressant, Any benzodiazepine or Z-drug, Any other mental disorder, Any current substance abuse disorder, Medication according to compassionate use or as part of a clinical trial, Any current psychotic disorder, Any mood stabilizer medication, Any antipsychotic, Smoking, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Any FIASMA, Age, Number of conditions	2976.87
Step 2	
Delirium or dementia, Any benzodiazepine or Z-drug, Any other mental disorder, Any current substance abuse disorder, Medication according to compassionate use or as part of a clinical trial, Any current psychotic disorder, Any mood stabilizer medication, Any antipsychotic, Smoking, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Any FIASMA, Age, Number of conditions	2974.87
Step 3	
Any benzodiazepine or Z-drug, Any other mental disorder, Any current substance abuse disorder, Medication according to compassionate use or as part of a clinical trial, Any current psychotic disorder, Any mood stabilizer medication, Any antipsychotic, Smoking, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2972.88
Step 4	
Any other mental disorder, Any current substance abuse disorder, Medication according to compassionate use or as part of a clinical trial, Any current psychotic disorder, Any antipsychotic, Any mood stabilizer medication, Smoking, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2970.91
Step 5	
Any current substance abuse disorder, Medication according to compassionate use or as part of a clinical trial, Any antipsychotic, Any current psychotic disorder, Any mood stabilizer medication, Smoking, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2969
Step 6	
Medication according to compassionate use or as part of a clinical trial, Any antipsychotic, Any current psychotic disorder, Smoking, Any mood stabilizer medication, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2967.12
Step 7	
Any antipsychotic, Any current psychotic disorder, Any mood stabilizer medication, Smoking, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2965.54
Step 8	
Smoking, Any mood stabilizer medication, Any antipsychotic, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2964.25

Step 9	
Smoking, Any antipsychotic, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2962.95
Step 10	
Any antipsychotic, Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2961.68
Step 11	
Any current mood or anxiety disorder, Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2960.77
Step 12	
Hospital, Obesity, Sex, Age, Any FIASMA, Number of conditions	2959.87

Supplementary Table 7. Association between FIASMA psychotropic medications without Sigma-1-receptor agonist effect and intubation or death among patients with mental disorder hospitalized for severe COVID-19.

	Number of events / Number of patients	Crude Cox regression analysis	Multivariable Cox regression analysis ^a	Analysis weighted by inverse-probability-weighting weights	Analysis weighted by inverse-probability-weighting weights ^a adjusted for unbalanced covariates ^b	Number of events / Number of patients in the matched groups	Univariate Cox regression in a 1:2 ratio matched analytic sample ^a	Cox regression in a 1:2 ratio matched analytic sample ^a adjusted for unbalanced covariates ^c
	N (%)	HR (95% CI; p-value)	HR (95% CI; p-value)	HR (95% CI; p-value)	HR (95% CI; p-value)	N (%)	HR (95% CI; p-value)	HR (95% CI; p-value)
No FIASMA psychotropic medication	215 / 381 (56.4)	Ref.	Ref.	Ref.	Ref.	26 / 49 (53.1)	Ref.	Ref.
Any non S1R agonist and FIASMA psychotropic medication ^d	15 / 49 (30.6)	0.33 (0.20 – 0.57; <0.001*)	0.30 (0.17 – 0.53; <0.001*)	0.28 (0.27 – 0.76; 0.003*)	0.37 (0.22 – 0.63; <0.001*)	15 / 49 (30.6)	0.39 (0.20 – 0.73; 0.004*)	0.40 (0.21 – 0.77; 0.006*)

^a Adjusted for age, sex, hospital, obesity and number of medical conditions.

^b Additionally adjusted for age, sex, hospital and number of medical conditions.

^c Additionally adjusted for sex, and obesity.

^d Any antipsychotic, hydroxyzine, Sertraline

* Two-sided p-value is significant (p<0.05).

Abbreviations: HR, hazard ratio, CI confidence interval.
