	Individuals with all negative samples (N=13)
Mean Age in years (SD)	57 (15)
# of Men (%) # of Women (%)	8 (61%) 5 (39%)
Ethnicity (%)	
Hispanic	5 (39%)
Black	6 (46%)
White	2 (15%)
Comorbidities	
Hypertension	5 (39%)
Diabetes Mellitus	2 (15%)
Coronary Artery Disease	1 (8%)
Chronic Kidney Disease	3 (23%)
Lung Disease (eg, COPD)	2 (15%)
No chronic disease	5 (38%)
COVID symptoms (%)	
Cough	3 (23%)
Shortness of breath	4 (31%)
Fever	4 (31%)
Diarrhea	2 (15%)
Chest Pain	0 (0%)
No COVID symptoms	8 (62%)
Oxygen Support Required (%)	
None	9 (69%)
Nasal Canula	0 (0%)
Mechanical Ventilation	4 (31%)
	0 (0%)
Symptom duration prior to baseline	
collection	12 days
Mean (range)	(4 – 28 days)
Days between in-hospital NP swab PCR and	
baseline collection: mean (range)	3 days
	(1 – 5 days)
Number of follow-up time-points per	0
participant: mean (range)	
Participants with negative NP swab PCR	
collected in clinical follow-up during	6 (50%)
hospitalization	

Table S1. Characteristics of participants with all negative samples.

Fig. S2. Paired sample sets showing Ct values comparing each respiratory sample collected in (A) VTM, N=84 and (B) eNAT, N=84. (C) Comparing nasopharyngeal specimens with direct saliva (N=37). The lines indicate samples from the same patient collected at the same time point. ns=not significant.

Fig. S3. (A and C) Internal control (SPC) cycle threshold (Ct) values for all respiratory specimens (A, N=84) and for selected saliva samples diluted in eNAT (C, N=44); (B and D) In-cartridge maximum pressure values (PSI) for different respiratory specimens (B, N=84) and for selected saliva samples diluted in eNAT (D, N=44). Each sample tested is represented by points (♠) on the scatter plot and the lines show the mean and standard deviation values. ns= not statistically significant.
