This PDF file includes:

Figs. S1 to S4

Other Supplementary Materials for this manuscript include the following:

Datasheet Table S1 to S16

Fig. S1. Proteomic and metabolomic profiling of plasma from CC and HC cases. A,B The distribution of numbers of quantified (a) peptides and (b) proteins in the 30 plasma samples. C The distribution of MS/MS spectral counts of quantified peptides. D The distribution of peptide numbers of quantified proteins. E PCA analysis of the 30 metabolomic data and 4 quality controls (QCs). We pipette $10~\mu L$ of each sample to pool a QC sample. F The distribution of MS/MS spectral counts of quantified metabolites.

Figure S2

Fig. S2.

The heatmaps for the identified plasma proteins and metabolites. A-B The heatmaps of the finally reserved proteins (A) and metabolites (B).

Figure S3

Fig. S3.The alternations of molecules in CC cases against AC cases. A-B PCA analyses of the proteomic data of CC and AC (A), and the metabolomics data of CC and AC (B). C The abundance of proteins enriched in the process of blood coagulation in CC and AC. **D** The abundance of metabolites enriched in the process of biosynthesis of amino acids in CC and AC. Type or paste caption here. Create a page break and paste in the Figure above the caption.
