

Table S6. Stepwise logistic model predicting AD status using plasma, CSF or both plasma and CSF metabolites. Stepwise analysis was performed with the maximal validation r^2 as the model stopping criteria, or if an additional step increased the BIC. Model stopping point for each analysis is highlighted.

Step	Parameter	L-R ChiSquare	Sig Prob	Entry ChiSquare	Entry "Sig Prob"	RSquare	AICc	BIC	RSquare Validation
Plasma									
1	DEA/LEA	32	0.0001	27.8	1.36E-07	0.219	118	124	0.153
