

Appendix

S1 Table

Information on the function of genes with decreased expression in prior asymptomatic versus clinical

SARS-CoV-2 infection

Gene	Description and Biological Terms Related (if applicable)
IFIT3	Interferon Induced Protein With Tetratricopeptide Repeats 3 Pathways: Innate Immune System and Interferon gamma signaling. Terms: identicalproteinbinding.
IFI44L	Interferon Induced Protein 44 Like Diseases associated: Lymph Node Tuberculosis and Immunodeficiency 38 With Basal Ganglia Calcification.
FOLR3	Folate Receptor Gamma Pathways: Innate Immune System and Endocytosis. Terms: folicacidbinding.
PI3	Peptidase Inhibitor 3. Pathways: Innate Immune System and Developmental Biology. Terms: serine-type endopeptidase inhibitor activity and peptidase inhibitor activity.
RSAD2	Radical S-Adenosyl Methionine Domain Containing 2 (Viperin) Pathways: Innate Immune System and Interferon gamma signaling. Terms: self-association andiron-sulfurclusterbinding.
ALOX15	Arachidonate 15-Lipoxygenase The enzyme acts on various polyunsaturated fatty acid substrates to generate various bioactive lipid mediators such as eicosanoids, hepoxilins, lipoxins, and other molecules. The encoded enzyme and its reaction products have been shown to regulate inflammation and immunity. [RefSeq, Aug 2017] Pathways: Interleukin-4 and 13 signaling and Arachidonic acid metabolism. Terms: iron ion binding and oxidoreductase activity, acting on single donors with incorporation of molecular oxygen, incorporation of two atoms of oxygen.
