

**Table 2.** Logistic regression models of tight junction permeability and microbial translocation markers for their ability to distinguish hospitalized from non-hospitalized individuals.

Variables	AUC	SE	95% Confidence interval		P-value (single predictor models vs. Lasso selected multivariable model)
Variables identified by Lasso multivariable logistic model	0.992	0	0.981	1.000	reference
<b>Zonulin</b>	0.951	0	0.901	1.000	0.0656
<b>LBP</b>	0.944	0	0.885	1.000	0.0987
$\beta$ glucan	0.841	0	0.748	0.933	0.0008
<b>sCD14</b>	0.930	0	0.871	0.988	0.0323
Occludin	0.663	0.1	0.542	0.783	<0.0001
Reg3A	0.635	0.1	0.510	0.759	<0.0001
sCD163	0.627	0.1	0.503	0.751	<0.0001
IFABP	0.538	0.1	0.408	0.668	<0.0001

Bold variables are variables selected by Lasso to be included in the multivariable logistic model; AUC = Area under the ROC Curve; SE = Standard error
