

1 **Table S1. Each of questionnaire's components' mean and concurrent validity, averse to**
 2 **the three-step-norm.** To confirm the screening result, the 92-item questionnaire was
 3 followed by interview as qualitative input and also questionnaire about children tendencies in
 4 sexual activities (Table S2), namely the three-step-norm. Its validity and reliability were
 5 demonstrated by confirmatory factor analysis (CFA > 1.96) and Cronbach's Alpha (0.903;
 6 CA > 0.7) values.

7

No.	Components	Mean ± SD	K-S p-value	p-value*
1	Sexual activities tendencies	11.20 ± 11.20	0.000	0.023**
2	Number of times, frequency, and duration spent	14.60 ± 2.54	0.121	0.013**
3	Motivation to use pornography	20.50 ± 4.68	0.002	0.009**
4	Problematic pornography use	69.55 ± 10.34	0.000	0.001**
5	Total score	79.85 ± 30.01	0.858	0.000**

8 *Unpaired t-test as the parametric test and Mann-Whitney as the non-parametric test.

9 **Statistically significant (p < 0.05)
