- Amino Acids and Derivatives 1,142 (7.35%)
- RNA Metabolism 1,069 (6.88%)
- Nucleosides and Nucleotides 850 (5.47%)
- DNA Metabolism 803 (5.17%)
- Cell Wall and Capsule 770 (4.96%)
- Cofactors, Vitamins, Prosthetic Groups, Pigments 679 (
- Membrane Transport 436 (2.81%)
- Virulence, Disease and Defense 365 (2.35%)
- Fatty Acids, Lipids, and Isoprenoids 335 (2.16%)
- Stress Response 237 (1.53%)

104D1 Clustering-based subsystems - 796 (18.76%) Carbohydrates - 557 (13.13%) Protein Metabolism - 472 (11.12%)

- RNA Metabolism 323 (7.61%)
- Miscellaneous 305 (7.19%)
- DNA Metabolism 228 (5.37%)
- Amino Acids and Derivatives 191 (4.50%)
- Cell Wall and Capsule 190 (4.48%)
- Nucleosides and Nucleotides 176 (4.15%)
- Cofactors, Vitamins, Prosthetic Groups, Pigments 148 (
- Virulence, Disease and Defense 125 (2.95%)
- Membrane Transport 121 (2.85%)
- Fatty Acids, Lipids, and Isoprenoids 99 (2.33%)
- Stress Response 91 (2.14%)

*Figure i. The Subsystems structure of the microbiome of patient 104 from baseline to day 7*. Higher increases could be seen in the percentage of stress response, nucleosides & nucleotides, protein metabolism, cofactors, vitamins, prosthetic groups, & pigments, and clustering-based subsystems on day 1 than the baseline. Reductions were seen in carbohydrates, amino acid & derivates, fatty acids, lipids, & isoprenoids. Day 7 presented fewer differences from baseline samples: increased clustering-based subsystems, nucleoside & nucleotides; reduced RNA metabolism. Changes in metabolism could be seen after the introduction to antibiotics, reflecting the change in the microbiota.

- Clustering-based subsystems 4,885 (17.57%)
- Carbohydrates 3,878 (13.95%)
- Protein Metabolism 2,624 (9.44%)
- Miscellaneous 2,470 (8.88%)
- RNA Metabolism 2,096 (7.54%)
- Amino Acids and Derivatives 1,916 (6.89%)
- DNA Metabolism 1,573 (5.66%)
- Cell Wall and Capsule 1,450 (5.22%)
- Cofactors, Vitamins, Prosthetic Groups, Pigments 1,297
- Nucleosides and Nucleotides 1,163 (4.18%)
- Membrane Transport 645 (2.32%)
- Fatty Acids, Lipids, and Isoprenoids 538 (1.94%)

Clustering-based subsystems - 262 (13.86%)

Amino Acids and Derivatives - 158 (8.36%)

Cofactors, Vitamins, Prosthetic Groups, Pigments - 186 (

- Virulence, Disease and Defense 537 (1.93%)
- Stress Response 495 (1.78%)

Carbohydrates - 271 (14.34%)

Miscellaneous - 179 (9.47%)

Protein Metabolism - 131 (6.93%)

RNA Metabolism - 93 (4.92%)

DNA Metabolism - 87 (4.60%)

Membrane Transport - 63 (3.33%)

Cell Wall and Capsule - 58 (3.07%)

- Membrane Transport 111 (2.27%)
- Stress Response 99 (2.03%)

*Figure ii. The Subsystems structure of the microbiome of patients 105 & 106 from baseline to day 7.* Carbohydrates', membrane transport, fatty acids, lipids, & isoprenoids, virulence, disease & defense increased in 2<sup>nd</sup> & 7<sup>th</sup> day. Protein, RNA metabolism, cell wall & capsule dropped in days 2 & 7, but amino acid derivates, nucleosides & nucleotides dropped on the same days whilst DNA metabolism dropped on day 7. Hence, antibiotics usage restructured the microbiota, affecting the metabolism state of the sputum microbiota.

- Clustering-based subsystems 6,087 (15.38%)
- Phages, Prophages, Transposable elements, Plasmids -
- Carbohydrates 4,659 (11.77%)
- Protein Metabolism 3,349 (8.46%)
- Miscellaneous 3,011 (7.61%)
