

## **Supplementary Appendix**

**Clinical presentation, disease course and outcome of COVID-19 in hospitalized patients with and without pre-existing cardiac disease – a cohort study across eighteen countries**

## Content

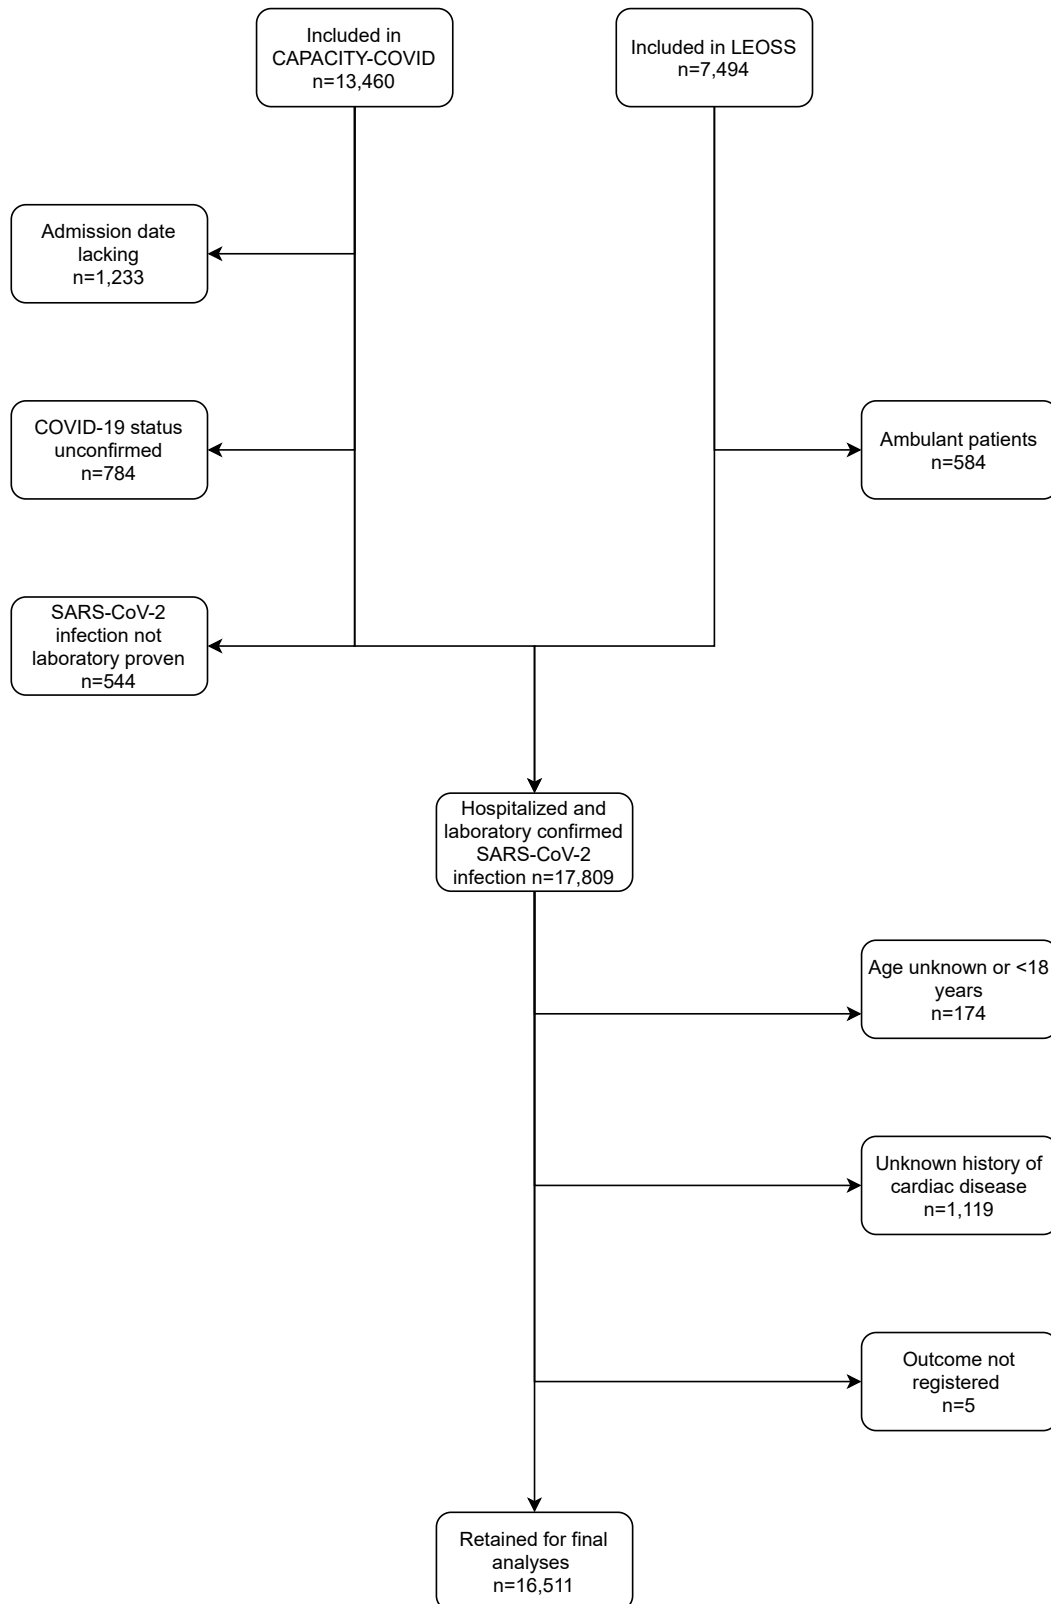

Table S1 Contributing hospitals.....	3 – 6
Figure S1 Selection of study population.....	7
Table S2 Baseline characteristics stratified by data source and age .....	8
Table S3 Detailed specification of pre-existing cardiac disease in CAPACITY.....	9 – 10
Figure S2 Complaints at presentation stratified by age.....	11
Figure S3 Complaints at presentation stratified by age and prior history of cardiac disease.....	12
Table S4 Complaints, vitals and laboratory values at admission stratified by data source and age.....	13 – 14
Table S5 Baseline characteristics stratified by admission to a critical care unit.....	15
Table S6 Complaints, vitals and laboratory values at admission stratified by admission to a critical care unit.....	16 – 17
Table S7 Baseline characteristics stratified by mortality.....	18
Table S8 Complaints, vitals and laboratory values at admission stratified by mortality.....	19 – 20
Table S9 Outcome at discharge stratified by data source and age.....	21
Table S10 Outcome at discharge stratified by admission to a critical care unit.....	22
Table S11 Outcome at discharge stratified by mortality.....	23
Table S12 Subgroup analyses of having any history of cardiac disease among clinically relevant subgroups .....	24
Table S13 Sensitivity analyses between centers with and without a selective inclusion strategy.....	25
Table S14 Associations across data sources between pre-existent heart disease subtypes and in-hospital mortality.....	26
Table S15 Subgroup analyses for patients that were admitted to a critical care unit.....	27
