**Notes**

\* SRS Death rates are as published by Registrar General of India's SRS Statistical Report 2018

\*\* CGHR (Centre for Global Health Research)-UN Death rates were calculated while applying the 2016-18 average death rates to calculate estimated deaths and then adjusting to the United Nations population Division estimated India deaths.

**Notes:**

1. \*\* - SRS-UN death estimates: SRS death rates applied to United Nations estimated population and then adjusted to UN estimated deaths. SRS death rates are under reported. In most civil registration completed states, registered deaths are closer to these estimated deaths.
2. # - numerator for % un-accounted female deaths at civil registration was the difference of SRS-UN estimated female deaths and the female civil registration deaths. SRS-UN estimated female death not shown in this table.

Sources of data: SRS vital Statistics reports, Medical certification of Causes of Death (MCCD), Vital statistics of India civil registration system, World Population Prospectus (WPP) of United Nations Population Division.

**Figure S1 - Reporting PCR Positive rates in population and undocumented deaths at civil registration in Indian states**

Notes: PCR positive rates for Apr-Dec 2020. Percent un-documented deaths were calculated using the difference between average civil registration deaths for 2017-19 and the expected deaths calculated for each state from SRS death rates adjusted for UN death estimates. The Pearson correlation between PCR positivity rate and the percent un-documented deaths in civil registration was -0.5.

**Figure S2 – Un-counted at civil registration and non-medically certified deaths in India 2019.** Out of the 10 million annual deaths in India, 3 million deaths are un-accounted at civil registration and 8.5 million are not medically certified
