2	Primary studies From 2019

12

13

2. Data extraction fields

DATA SOURCES	
<i>Source where the data that is analyzed in the study comes from. This category is used to identify the country later</i>	
Inert sources	e.g., sewage, surfaces, air particles, etc. The paper needs to specify that the country where the sources come from to be included
Animals	
Directly humans	Information is directly collected from humans
Databases	Human information that was not directly collected from humans (i.e., someone else collected the data before the research)
Documents	Documentary analysis (e.g., analyses of government documents, bulletins, reports, etc.)
Not described	If it is not described, the study should be excluded (e.g., the study analyze molecules coming from samples that the article does not specify where do they come from)
Other	

BROAD METHODOLOGY
PARADIGM
<i>High-level methodology that the study uses</i>
Basic science

Quantitative
Qualitative
Mixed-methods

16

STUDY DESIGNS	
<i>Depending on the methodology selected, we could use several options here</i>	
Basic sciences	We will not identify the study design if the study is about basic sciences for now
Quantitative	
Randomized controlled trial	
Non-randomized controlled trial	Patients allocated to intervention and control group without randomization
Controlled before and after (including diff in diff analysis)	At least two groups are compared before and after an intervention
Single before and after	Only one group is compared before and after an intervention/exposure
Interrupted time series	Time series are compared before and after the intervention is implemented. It is differently from a descriptive time series
Propensity score matching	Two groups are compared matching by several variables
Cohort study	

Case-control study	
Cross-sectional study	
Ecological study	Where the unit of analysis is not a patient but a group of patients (e.g., comparing the rates of two different countries, cities)
Descriptive time series	Time series that are used to only describe trends
Simulation model used to predict	
Validation of a simulation model	
Economic evaluation	Cost-utility, cost-effectiveness, cost-benefit analysis
Cost study	Budget analysis, just measuring how much does it cost an intervention
Other	
Qualitative	
Case-study	There are single or multiple case studies, where cases (institutions, organizations, etc) are compared in their processes
Narrative	Study to describe the main codes coming from speeches or information collected from people
Ethnography	

Phenomenological	
Grounded theory	
Other	
Mixed methods	
Exploratory	Quantitative is conducted after qualitative phase
Explanatory sequential	Qualitative is conducted after quantitative phase
Convergent	Qualitative and quantitative are conducted at the same time
Other	

17

STATUS OF PUBLICATION
<i>Whether or not the study has been finished or not</i>
Completed
Ongoing
Terminated

18

WHO CLASSIFICATION
<i>The main research subject is classified in one of these 10 areas.</i>
Virus natural history, transmission and diagnostics

Animal and environmental research on the virus origin, and management measures at the human-animal interface
Epidemiological studies
Clinical management
Infection prevention and control, including health care workers' protection
Candidate therapeutics R&d
Candidate vaccines R&D
Ethics considerations for research
Social sciences in the outbreak response
Health systems arrangements
Other, including mental health

19

RESEARCH QUESTION	
<i>Type of research question. Knowledge that we are looking from the main intervention/exposure/phenomenon of interest</i>	
Benefits and harms of an intervention	Effectiveness or efficacy of an intervention
Costs and value for money	Budget impacts, economic evaluations, cost estimations,etc.
Magnitude of the problem	Measuring how big is a problem/issue (e.g., the impact of pandemic)

Views and preferences	Values and preferences of the population on a specific topic
How and why it works	Usually questions related to explore the mechanism of action of an intervention
Implementation barriers and facilitators	
Feasibility	How feasible is to implement an intervention
Diagnostic accuracy	
Prognosis	Study analyzing what factors determine the prospect of a health condition in the future (usually clinical) (e.g., does smoking increase the risk of becoming a critical COVID-19 patient?)
To describe a population	Prevalence, incidence on a specific population
Other	

20

21

TYPES OF FUNDING	
<i>Type of organization that is funding the research. We might need to google the organization that is reported to be funding</i>	
Government	or government agencies
International organizations	e.g., WHO, PAHO, etc.
Universities or research	

centres	
NGOs	
Private companies	e.g., pharmaceutical companies
Other	

22

23

3. Data on the number and rate of publications per country

Country	Frequency	Population	Rate (publications per 1,000,000 population)	Rate excluding small countries with less than 1000000 population	Rate of research per FTE researchers*10 00
