

SUPPLEMENTARY MATERIAL

Appendix I

Each of RoBERTa, BERTweet, and BioBERT has multiple implementations which differ in the model size, the pre-training data size, and the training time. The specific models for RoBERTa, BERTweet and BioBERT we used in our experiments are RoBERTa_Base, BERTweet_Base and BioBERT v1.1.

Appendix II

Hyper-parameter	
Number of Layers	12
Hidden size	768
FFN inner hidden size	3072
Attention heads	12
Attention head size	64
Dropout	0.1
Attention Dropout	0.1
Weight Decay	0.01
Learning Rate Decay	Linear
Adam β_1	0.9
Adam β_2	0.98
Gradient Clipping	0
Batch Size	32
Warmup Ratio	0
Adam Epsilon	1×10^{-8}

Table 1. The full hyper-parameter configurations of the classification model. The maximum sequence size of each model is set as the same as the off-the-shelf model, which is 128 for BERTweet and 512 for the rest models.
