### **Whole genome sequencing approach**

KPSC began sending all positive SARS-CoV-2 specimens to a commercial laboratory (Helix, California, USA) for whole genome sequencing (WGS) beginning March 2021. In Helix workflow, SARS-CoV-2 genome capture was accomplished using hybridization capture with the xGen COVID-19 Capture Panel (Integrated DNA Technologies, Iowa, USA). Specimens were sequenced using the NovaSeq 6000 Sequencing System S1 Reagent Kit v1.5 (300 cycles) (Illumina, California, USA). Sequence reads were aligned to the SARS-CoV-2 reference genome (NCBI accession NC\_045512.2) and the human transcriptome (GENCODE v37) using BWA-MEM, and variants were called using the Haplotyper algorithm (Sentieon Inc, California, USA). Consensus sequences (FASTA) required each allele to have at least 5 unique reads with at least 80% of the reads supporting the allele.

### **Power calculations**

Analyses were conducted for variants with at least 20 cases, based on the following power calculations. For a 1:5 matched test-negative design, assuming a 60% vaccination rate (2 doses of mRNA-1273) in test-negative controls, 20 cases of were needed to detect a vaccine effectiveness of 0.8 with 80% statistical power.

a Model adjustment:

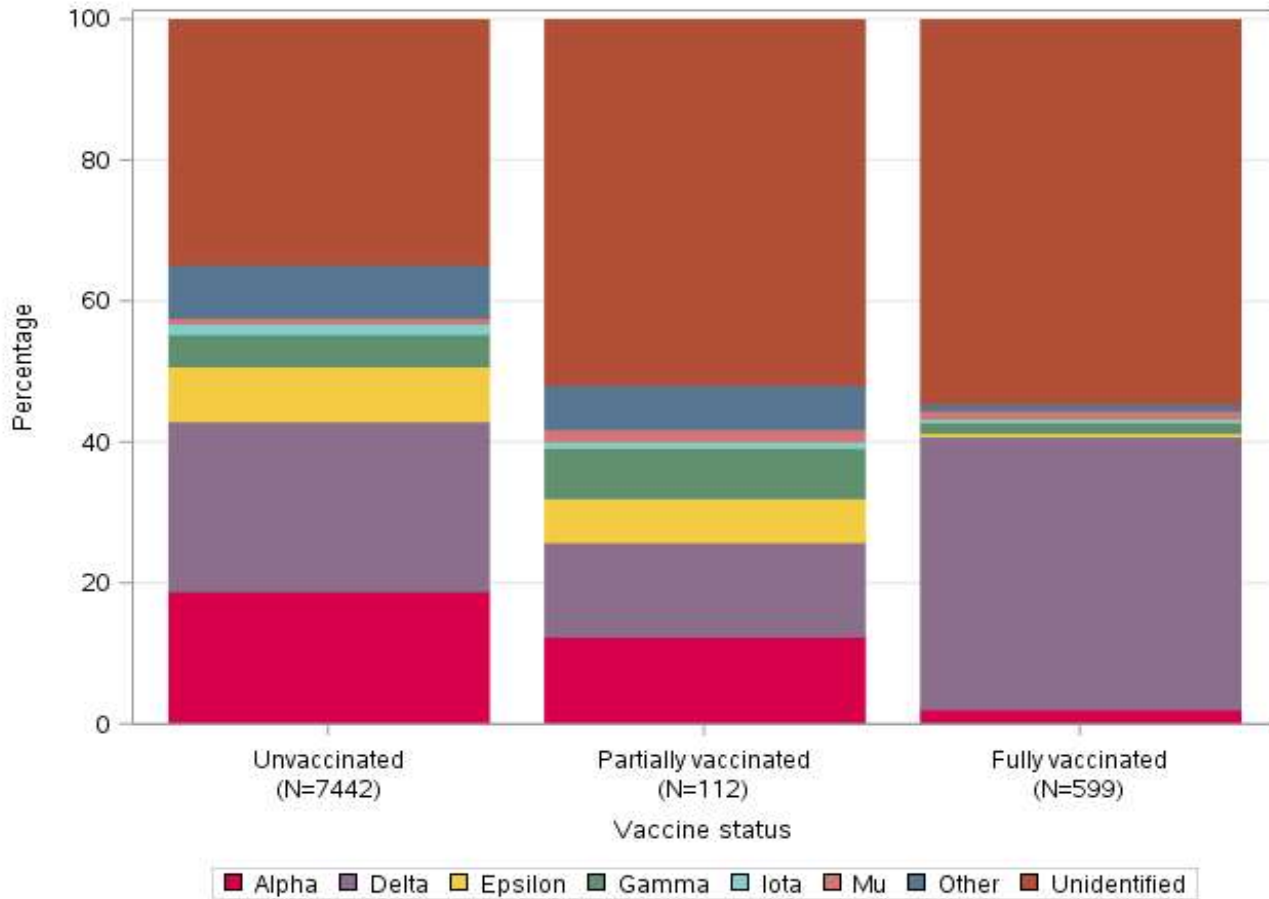

Model for Delta adjusted for covariates: smoking, Charlson comorbidity score, frailty index, liver disease, pregnancy, history of COVID-19 diagnosis, number of outpatient and virtual visits, preventive care, medical center area, month of specimen collection, specimen type.

Model for Non-Delta variant adjusted for covariates: BMI, smoking, Charlson comorbidity score, frailty index, kidney disease, heart disease, lung disease, immunocompromised status, pregnancy, history of COVID-19 diagnosis, number of outpatient and virtual visits, number of ED visits, number of hospitalizations, preventive care, medical center area, month of specimen collection, specimen type.

Model for Unidentified variants adjusted for covariates: BMI, smoking, Charlson comorbidity score, frailty index, pregnancy, history of COVID-19 diagnosis, number of outpatient and virtual visits, number of ED visits, preventive care, medical center area, month of specimen collection, specimen type.

Abbreviations: BMI, Body Mass Index; CI, Confidence Interval; ED, Emergency Department; N/E, Not Estimable
