

Sampling Statistical Errors in Big Data Research: 3 Cases of Breast Cancer Research

Han-Jun Cho¹, EuiSeok Jeong²

1. Department of Biomedical Institute for Convergence at SKKU, Suwon, 16419, South Korea
2. Department of Ecological Science, Kyungpook National University, Sangju 37224, South Korea

Table 1. Recurrence groups of Breast cancer patients from TCGA data set (N=652)

Recurrence	Patients (%)
Disease Free(R0)	589 (90.3%)
Recurred/Progressed (R1)	63 (9.7%)

Total of 40 recurrence-related genes were selected by ML, and of which 7 genes were identified as recurrence-specific. Each feature selection methods and performances of classifiers were useful according to disease free/recurred groups. Extremely useful genes were extracted.

Table 2-1. Recurrence-specific 3 out of 40 common genes from top 100 genes, respectively selected by 4 feature selection methods.

Gene \ Type	Recurrence group		Recurrence (%)	Mutation Number	Mutation/652 (%)	Mutation Type			Fisher's exact (p-value)	cytoband
