Analysis of incident events was restricted to participants free of cardiovascular disease

(MI/CAD, heart failure, stroke, aortic stenosis, or atrial fibrillation) at baseline (n=155,717).

Participants with prevalent CVD (myocardial infarction or coronary artery disease, heart failure, stroke, aortic stenosis, or atrial fibrillation) or the outcome of interest at baseline were excluded.

Clinical covariates: age, sex, heart rate, body mass index, systolic and diastolic blood pressure prevalent diabetes mellitus, hypercholesterolemia, and ever smoking. All results exclude patients with any of these conditions at baseline. CI, confidence interval; HR, hazard ratio; MI/CAD, myocardial infarction or coronary artery disease; SD, standard deviation.

Analysis of incident events was restricted to participants free of cardiovascular disease (MI/CAD, heart failure, stroke, aortic stenosis, or atrial fibrillation) at baseline (n=155,717). Participants with prevalent hypertension were also excluded for hypertension outcome only. Clinical covariates: age, sex, heart rate, body mass index, systolic and diastolic blood pressure prevalent diabetes mellitus, hypercholesterolemia, and ever smoking. All results exclude patients with any of these conditions at baseline. MI/CAD, myocardial infarction or coronary artery disease.

C-statistics refer to Cox proportional hazards regression models restricted to patients free of cardiovascular disease (MI/CAD, heart failure, stroke, aortic stenosis, or atrial fibrillation) and the outcome of interest at baseline. Multivariable model includes the follow covariates: age, sex, body mass index, heart rate, systolic and diastolic blood pressure, ever smoking, prevalent hypercholesterolemia, and prevalent diabetes mellitus.
