* Information obtained from registers

** Response option not offered to participants

***Data only collected in long follow-ups, hence missing data independent of hospitalisation. Participants who got diagnosed at the other eight follow-ups have not answered this question

MAP-19

*1 This number include higher education in Norway, encompassing both Bachelor, Master and PhD.

*2 We ask about a current psychological disorder

*3 do you want the number of COVID-19 infected at that timepoint or whether they filled out the questionnaires? Currently it is those who filled out the questionnaires at the different timepoints

Table S3: Overview of total number of COVID-19 cases per country and proportion of population diagnosed with COVID-19¹

| Cohort | Location | End of study | Total cases at end of study^a | Population of country | Proportion of population with confirmed COVID-19 diagnosis |
|----------------|-----------------|---------------------|--|------------------------------|---|
| DBDS | Denmark | August 2021 | 347 028 | 5 813 302 | 6·0% |
| EstBB-C19 | Estonia | August 2021 | 141 956 | 1 325 188 | 10·7% |
| C19-Resilience | Iceland | August 2021 | 10 789 | 343 360 | 3·1% |
| MAP-19 | Norway | August 2021 | 160 174 | 5 465 629 | 2·9% |
| MoBa | Norway | May 2021 | 125 116 | 5 465 629 | 2·3% |
| Omtanke2020 | Sweden | June 2021 | 1 089 990 | 10 160 159 | 10·7% |
| CovidLife | United Kingdom | February 2021 | 4 188 827 | 68 207 114 | 6·1% |

^aNumber of cases on the last day of the month

Table S4: Prevalence and prevalence ratios of mental health indicators among individuals with and without a diagnosis of COVID-19, overall and in subgroup analyses by illness severity and time from diagnosis for each cohort. Combined prevalence for each mental health indicator included as well.

^a Adjusted for gender, age, education, relationship status, smoking, BMI, previous psychiatric diagnosis, number of comorbidities and response period

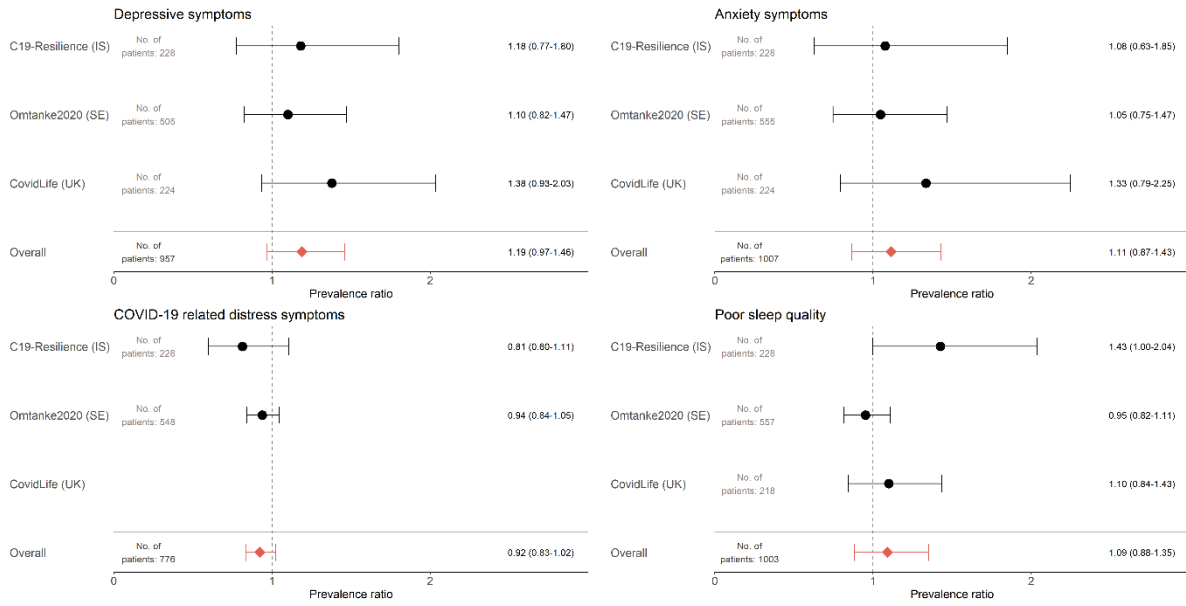

Figure S2: Change in mental health indicators before and after diagnosis of COVID-19, sub-analysis within cohorts with repeated measures (Median time between follow up for cohorts: C19-Resilience: 7.3 months, Omtanke2020: 1 month, CovidLife: 10 months).

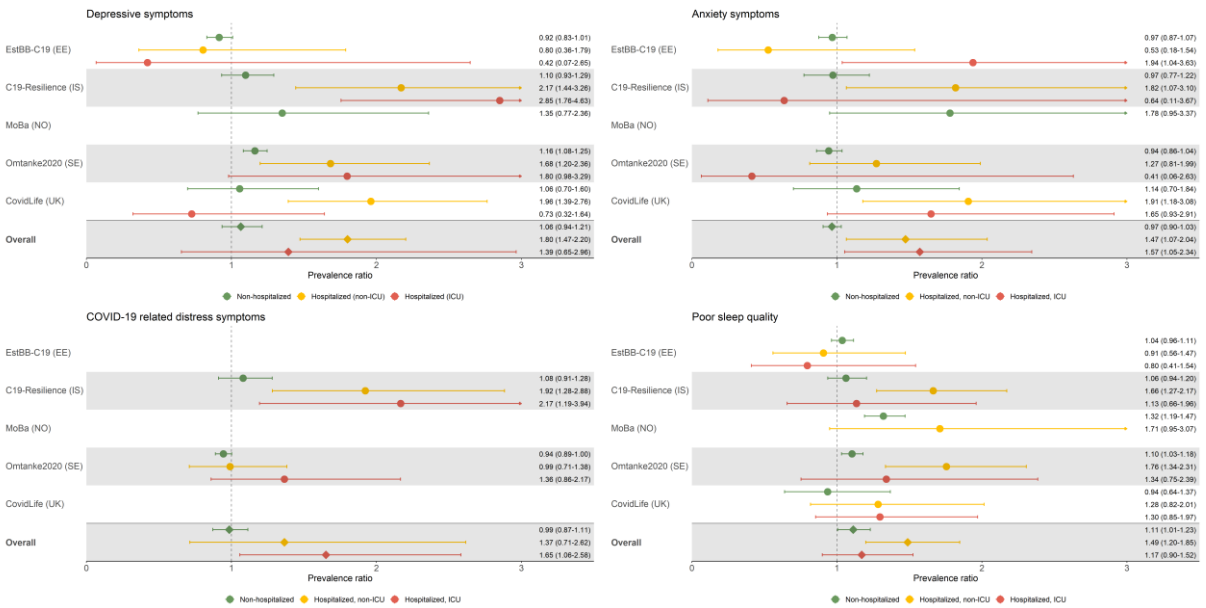

Figure S3: Mental health indicators among individuals with a diagnosis of COVID-19 compared with individuals without COVID-19 by hospitalization status.

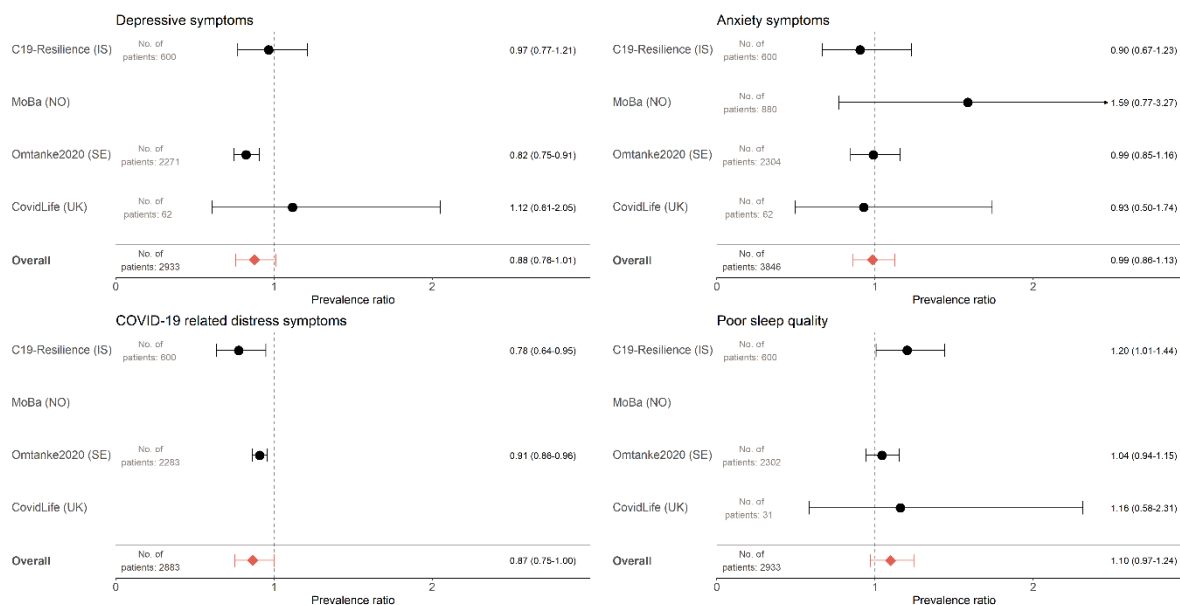

Figure S4: Change in mental health indicators from first to last measure after diagnosis of COVID-19, sub-analysis of patients with COVID-19 with repeated measures (Median time between follow up for cohorts: C19-Resilience: 12.7 months, MoBa: 10.1 months, Omtanke2020: 6 months, CovidLife: 10 months).

Table S5: Overall prevalence ratios of mental health indicators during the first 16 months after diagnosis of COVID-19 by illness severity

| Mental health indicator | Time since diagnosis | Time spent bedridden | PR (95% confidence interval) |
|-------------------------|----------------------|----------------------|------------------------------|
| Depressive symptoms | 0–2 months | Never bedridden | 0.84 (0.69-1.03) |
