<sup>a</sup> Birthweight was not included as an independent variable for relative region of interest volumes adjusted for total brain volume to avoid overfitting the regression models. Relative region of interest volumes were computed as the volume of the region divided by total brain volume.

**Table S4.** Hierarchical Regression Model Linking Maternal Social Advantage and Psychosocial Stress with Total Brain Volumes (TBV) at Birth ( $n=280$ )

Total Brain Volume	Step 1		Step 2		Change Statistics
