

Supplementary 1. Stress experienced by children and adolescents according to the number of school absences, stratified by the type of absence and socio-demographic characteristics

	Absence from school			p-value ^b	
	None	Once	Twice or more		
	N	Mean (SD) ^a	Mean (SD) ^a	Mean (SD) ^a	
Total	538	2.1 (1.2)	2.2 (1.2)	2.2 (1.2)	0.31
School/class closure	538	2.1 (1.2)	2.4 (1.3)	-	0.28
Individual absence	538	2.1 (1.2)	2.2 (1.2)	2.3 (1.3)	0.57
Sex					
Female	258	2.3 (1.2)	2.3 (1.3)	2.2 (1.3)	0.39
Male	273	1.9 (1.1)	2.2 (1.1)	2.2 (1.2)	0.39
Diverse	7	2.0 (1.0)	1.5 (0.7)	2.5 (2.1)	0.82
School level					
Primary (4-12 years old)	347	2.0 (1.2)	2.1 (1.2)	2.2 (1.3)	0.39
Lower secondary (12-15 years old)	121	2.3 (1.2)	2.5 (1.2)	2.0 (1.2)	0.39
Upper secondary (15-18 years old)	64	2.4 (1.2)	2.4 (1.4)	2.5 (1.0)	0.91
Household financial situation^c					
Very good	182	1.9 (1.0)	2.1 (1.2)	2.2 (1.3)	0.33
Good	189	2.1 (1.2)	2.4 (1.1)	1.9 (1.0)	0.23
Medium to poor	107	2.5 (1.5)	2.5 (1.4)	2.5 (1.4)	0.95
No answer	55	2.1 (1.0)	2.0 (1.2)	2.3 (1.2)	0.62

^a Stress level reported by parents answering the question: Currently, how would you assess your child's stress level on a scale from 1 (lowest) to 6 (highest)?

^b Kruskal-Wallis test; as p-values were higher than 0.1, we considered that an adjustment for multiple comparisons was not needed.

^c Very good: affluent, can save money; Good: earning sufficient to cover expenses and to face minor unexpected expenses; Medium to poor: cannot face unexpected expenses and/or need external financial support
