Supplement 1. ESM compliance and validity of the daily life measures

Compliance to the ESM beep questionnaires started at 39% at baseline, and dropped to approximately 30% at post-intervention and 6-month follow-up. Participants filled in on average 4 out of 6 evening questionnaires at baseline and at 6-month follow-up. ESM evening questionnaire data at post-intervention is missing for all participants due to technical errors.

To assess concurrent validity of global and daily life psychological flexibility, we calculated baseline Pearson-correlations between all person-mean ESM outcomes on the one hand and the baseline FIT-60 total and subscale scores on the other. In-the-moment openness correlated significantly (all $P < .001$) with the open (acceptance, defusion) and aware (self as context, mindfulness) FIT-60 subscales, with moderate to large correlation coefficients between .39 (self as context) and .58 (defusion). Since-the-last-beep openness correlated moderately with total psychological flexibility ($r = .41$; $p = .011$), acceptance ($r = .30$; $P = .014$), defusion ($r = .37$; $p < .001$), and mindfulness ($r = .31$; $P < .001$). Daily psychological flexibility correlated significantly with all ACT processes (all $P < .01$, $r = .36$ to $.60$). These correlations thus provided support for the convergent validity of our daily life psychological flexibility measures with retrospective psychological flexibility (see Supplementary Table 1).

Supplementary tables

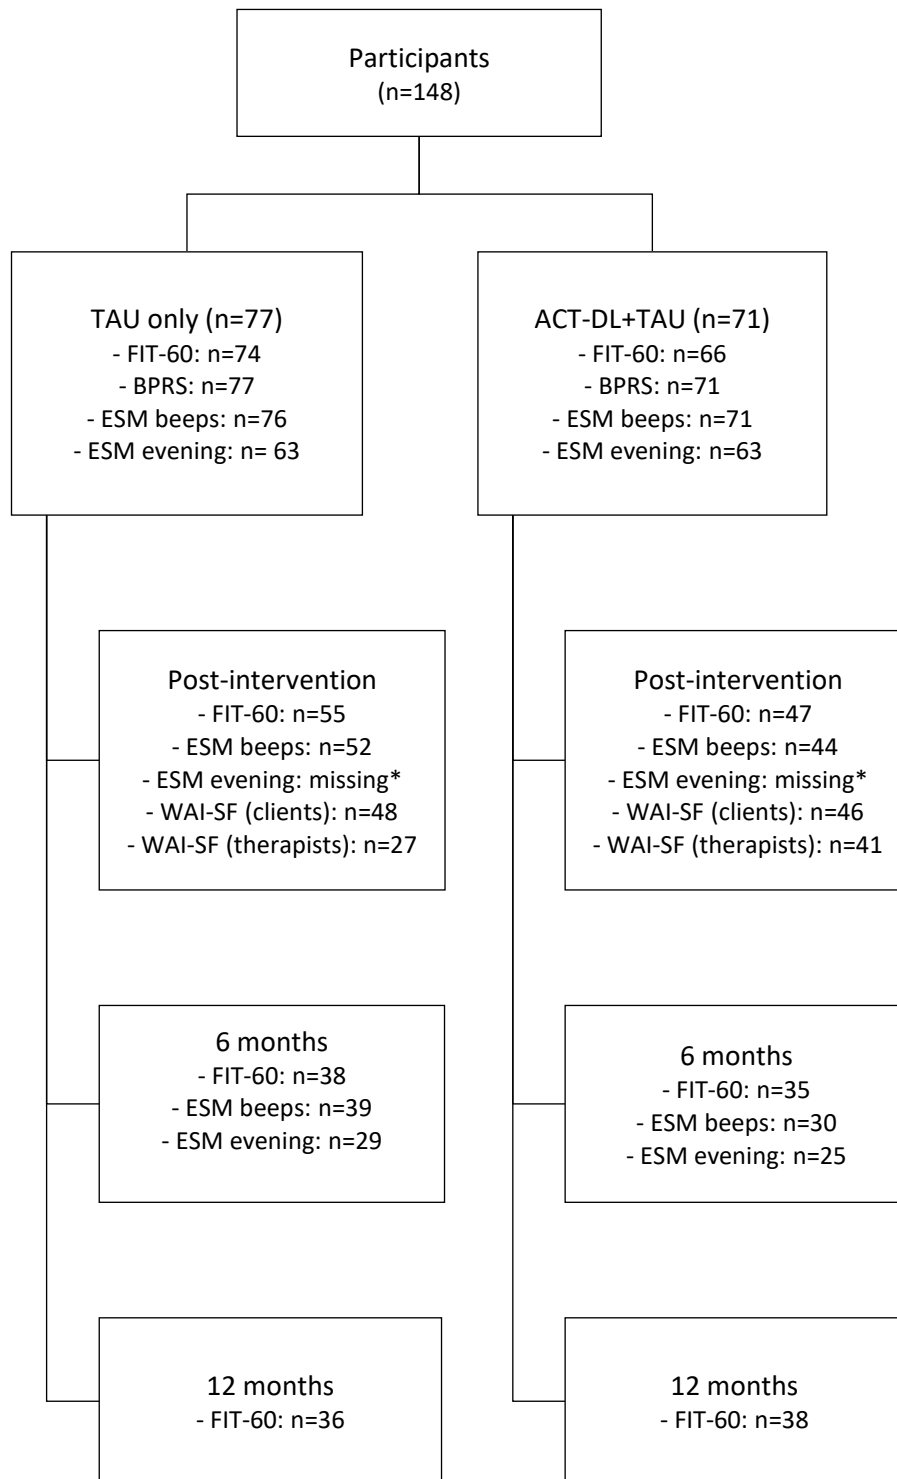

Supplementary Table 1.

Correlations between daily life and global psychological flexibility measures.

Measure	In-the-moment openness		Since-the-last- beep openness		Daily psychological flexibility	
	Corr.	P-value	Corr.	P-value	Corr.	P-value
Global PF	0.54	<.001	0.31	.011	0.59	<.001
Acceptance	0.53	<.001	0.30	.014	0.36	.001
Defusion	0.58	<.001	0.37	<.001	0.39	<.001
Mindfulness	0.54	<.001	0.31	.009	0.44	<.001
Self as context	0.39	<.001	0.15	>.999	0.43	<.001
Values	0.21	.360	0.03	>.999	0.60	<.001
Committed action	0.16	>.999	0.13	>.999	0.52	<.001

Notes. PF = Psychological flexibility. Data represent Bonferroni corrected pairwise correlations and p-values. Corr. = correlation.
