

Supplementary table 1. Frequency of events regarding COVID-19 infection, hospitalization and death in the historical cohorts of fully vaccinated and unvaccinated people

Vaccine	Infection [Positive RT-PCR]	Hospitalization [suspicious/definite*]	Hospitalization [definite]	Death [suspicious/definite]	Death [definite]
BIBP-CorV	6,918	3,835	2,534	294	225
ChAdOx1-S/nCoV-19	1,158	633	367	32	20
rAd26-rAd5	181	109	63	1	0
BIV1-CovIran	482	221	133	5	3
Unvaccinated [†]	42,528	17,005	10,890	2,394	1,931

* Suspicious = Negative RT-PCR but clinically in favor of COVID-19 infection; Definite = Positive RT-PCR and clinically in favor of COVID-19 infection.

[†] Frequencies of the unvaccinated cohort for ChAdOx1-S/nCoV-19 vaccine were 32,702, 13,384, 8,564, 1,314, and 1,049, respectively.

Abbreviations: RT-PCR = reverse transcription–polymerase chain reaction.

Supplementary table 2. Age-specific frequency of events regarding COVID-19 infection, hospitalization and death in the historical cohorts of fully vaccinated and unvaccinated people

Vaccine	Infection [Positive RT-PCR]	Hospitalization [suspicious/definite*]	Hospitalization [definite]	Death [suspicious/definite]	Death [definite]
BIBP-CorV					
18-44 y	1,714	279	259	12	11
45-64 y	2,540	987	733	45	28
>64 y	2,664	2,089	1,542	237	186

Unvaccinated					
18-44 y	30,461	8,078	5,179	295	241
45-64 y	9,190	5,361	3,541	797	658
>64 y	2,877	3,566	2,170	1,302	1,032

* Suspicious = Negative RT-PCR but clinically in favor of COVID-19 infection; Definite = Positive RT-PCR and clinically in favor of COVID-19 infection.

[†] Frequencies of the unvaccinated cohort for ChAdOx1-S/nCoV-19 vaccine were 23,936, 7,024, 4,551, 225, and 187, respectively.

[‡] Frequencies of the unvaccinated cohort for ChAdOx1-S/nCoV-19 vaccine were 7,230, 4,401, 2,919, 524, and 436, respectively.

[§] Frequencies of the unvaccinated cohort for ChAdOx1-S/nCoV-19 vaccine were 1,536, 1,959, 1,093, 565, and 426, respectively.

Abbreviations: RT-PCR = reverse transcription–polymerase chain reaction.

Supplementary table 3. Age-specific incidence density per 100,000 persons-day regarding COVID-19 infection, hospitalization and death in the historical cohorts of fully vaccinated and unvaccinated people

Vaccine	Infection [Positive RT-PCR]	Hospitalization [suspicious/definite *]	Hospitalization [definite]	Death [suspicious/definite]	Death [definite]
BIBP-CorV

* Suspicious = Negative RT-PCR but clinically in favor of COVID-19 infection; Definite = Positive RT-PCR and clinically in favor of COVID-19 infection.

[†] Incidence densities of the unvaccinated cohort for ChAdOx1-S/nCoV-19 vaccine were 23.38 [23.09-23.68], 6.79 [6.63-6.95], 4.39 [4.26-4.52], 0.22 [0.19-0.25], and 0.18 [0.15-0.21], respectively.

[‡] Incidence densities of the unvaccinated cohort for ChAdOx1-S/nCoV-19 vaccine were 25.48 [24.90-26.08], 15.40 [14.95-15.86], 10.18 [9.82-10.56], 1.82 [1.67-1.98], and 1.51 [1.37-1.66], respectively.

[§] Incidence densities of the unvaccinated cohort for ChAdOx1-S/nCoV-19 vaccine were 8.45 [8.04-8.89], 10.80 [10.33-11.29], 6.01 [5.66-6.37], 3.10 [2.85-3.36], and 2.33 [2.12-2.56], respectively.

[#] 95% confidence interval

[‡] No mortality reported

Abbreviations: RT-PCR = reverse transcription–polymerase chain reaction.
