Item 2. **Definition of ANM**

Women's Health Initiative (WHI): Age of natural menopause was derived by WHI from questions related to menopause status and provided via the MENO variable which we used as the ANM in our analyses. Questions related to menopause status included "How old were you when you last had any menstrual bleeding?", "When was the last time you had any menstrual bleeding or spotting?", "How old were you when you first had symptoms such as hot flashes or night sweats?", "Did you ever have a hysterectomy?", "How old were you when you had your hysterectomy", "Did you ever have an operation to have one or both of your ovaries taken out?", and "How old were you when you had your last operation to remove an ovary?" For women with history of bilateral oophorectomy before menopausal symptoms began, their ANM is not available. For women with history of hysterectomy in the absence of bilateral oophorectomy before menopausal symptoms began, their

ANM was estimated from the age of their menopausal symptoms instead of last menstrual bleeding. For the remaining women, their ANM was derived from the age of last menstrual bleeding and defined as the age of the participant after 1 year of amenorrhea.

UK Biobank (UKB): Women who indicated they had undergone menopause were asked: "How old were you when your periods stopped?" Their response was recorded in field 3581 labeled "age at menopause". Given the ambiguity of the question (i.e., they were not asked for age at last menstrual period), we took this field at face value. This field was collected from women of a variety of ages in the UK Biobank and therefore could have been many years post-menopause. To mitigate against recall error, we used a two-year buffer for definition of both surgical causes of period cessation and clinical outcome cases. Thus, women who had undergone bilateral oophorectomy (field 3882) at or before the age of field 3581 + 2 years were excluded. UKB did not collect data on other menopausal symptoms, so women who had a hysterectomy prior to menopause did not have an available age of menopause. Those with an age of hysterectomy (field 2824) at or before the age of field 3581 + 2 years were also excluded.

Item 3.

Phenotypic definitions; unique identifiers for each variable used from Women's Health Initiative and UK Biobank. Retrievable from (<u>https://sp.whi.org/researchers/data/SitePages/SAS%20Variables.aspx</u>) and (<u>https://biobank.ctsu.ox.ac.uk/crystal/search.cgi</u>).

Item 3a.

Table. Definition of covariates in Women's Health Initiative data. (Documented variable order may differ from question number in form, given that some questions have subsections.) Covariate Variable ID Units Form Variable Order Description Age at which participant went through menopause. Computed using Form 31, questions 5, 6.1, 10, 10.1; Form 2, questions 7, 18, 18.2; age at menopause MENO vears 31 63 Form 43 (age first used HRT). age at enrollment Derived from date of birth and date of enrollment AGE vears 2 6 Derived from measured height and weight at 20 body mass index BMI kg/m^2 80 enrollment Measured at baseline (question 6.1 and 6.2), systolic blood pressure SYST mmHg 80 7 averaged from two readings numeric education EDUC 20 3 ordinal variable with 11 categories (question 6) category numeric 25 INCOME 20 ordinal variable with 9 categories (question 11) family income category number of servings per alcohol F60ALCWK 60 32 self-reported from food frequency questionnaire week Computed from form 143, questions 6, 6.1, 6.2, MFTphysical activity TEXPWK hours/week 143 210 7.1-7.6 F60VITD mcg/day 56 self-reported from food frequency questionnaire dietary vitamin D 60 number of Number of pregnancies lasting at least 6 months, PARITY 55 number of pregnancies pregnancies 31 computed from form 31, questions 7, 7.6, 7.7 WHO fracture risk WHOFRAC risk score Risk scores 2 Derived using the FRAX tool n/a Computed from Form 34, questions 1, 1.2, and True/False 48 current smoking SMOKING 34 1.5. Item 3b.

Table. Definition of clinical outcomes in Women's Health Initiative data.						
Outcome	Variable ID	Form	Variable Order	Description		
Breast cancer	BREAST	CT & OS Adjudicated Outcomes	97	Defined as the first occurrence of Invasive or In Situ Breast Cancer. All Deaths due to breast cancer are considered Invasive Breast Cancers. Breast Cancer is adjudicated for CT and OS participants.		
Endometrial cancer	ENDMTRL	CT & OS Adjudicated Outcomes	124	Defined as the first occurrence of Endometrial Cancer or a Death due to Endometrial Cancer. Endometrial Cancer is adjudicated for CT and OS participants.		
Ovarian cancer	OVARY	CT & OS Adjudicated Outcomes	205	Defined as the first occurrence of Ovarian Cancer or a Death due to Ovarian Cancer. Ovarian Cancer is adjudicated for CT and OS participants.		
Lung cancer	LUNG	CT & OS Adjudicated Outcomes	160	Defined as the first occurrence of Lung Cancer or a Death due to Lung Cancer. Lung Cancer is adjudicated for CT and OS participants.		
Coronary heart disease	CHD	CT & OS Adjudicated Outcomes	16	Defined as the first occurrence of Clinical MI, Definite Silent MI or a Death due to Definite CHD or Possible CHD. Clinical MI and Death were adjudicated for CT and OS ppts through Ext1. In Ext2 they are only adjudicated for the Medical Record Cohort.		
lschemic stroke	STRKISCH	CT & OS Adjudicated Outcomes	40	Defined as a Stroke where the diagnosis question indicates an iscemic stroke. Ischemic Stroke was adjudicated for CT and OS participants through Ext1. In Ext2 it is only adjudicated for the Medical Record Cohort.		
Fracture	ANYFX	CT & OS Adjudicated Outcomes	280	Defined as the first fracture of Hip, upper leg, pelvis, knee, lower leg, ankle, foot(not toe), tailbone, spine or back, lower arm or wrist, hand (not finger), elbow, upper arm or shoulder and other.		
		Self Reported Outcomes for CT/OS through WHI Extension				
Osteoporosis Alzheimer disease	F33OSTEOP	Study 1 Self Reported Outcomes for CT/OS through WHI Extension Study 1	43	Not collected after WHI study closeout. Combined from all three instances (CT/OS extension 1, CaD extension 1, and extension 1)

SNP = single nucleotide polymorphism; Chr = chromosome number; SE = standard error; WHI = Women's Health Initiative; UKB = UK Biobank. * indicates SNPs with an inconsistent direction of effect between Day and WHI, # indicates 3 SNPs that failed imputation on ~10% samples in WHI, ** indicates SNPs with an inconsistent direction of effect between Day and UKB. These SNPs were excluded from further analysis.
