Adequacy of Self-Collected Anterior Nares Swabs for SARS-CoV-2 Testing by Grade School Children

Supplemental Material

Jesse J. Waggoner, Miriam B. Vos, Erika A. Tyburski, Phuong-Vi Nguyen, Jessica M. Ingersoll, Candace Miller, Julie Sullivan, Mark Griffiths, Cheryl Stone, Macarthur Benoit, Laura Benedit, Brooke Seitter, Robert Jerris, Joshua M. Levy, Colleen S. Kraft, Sarah Farmer, Amanda Foster, Anna Wood, Adrianna L. Westbrook, Claudia R. Morris, Usha N. Sathian, William Heetderks, Li Li, Kristian Roth, Mary Barcus, Timothy Stenzel, Greg S. Martin, and Wilbur A. Lam

Methods

Self-swab evaluation questionnaire

To participant: What did you think about the video?

- 1. Enter participant response _____
- 2. Did the participant attempt the swab collection? (Y/N)
- 3. Did you observe the participant experiencing significant difficulties while completing the swab collection? (Y/N)
- 4. Did the participant require assistance? (Y/N)à If yes, what kind of assistance? (Technical, Instructional, Task)
 - During which task(s) did the participant require assistance? (Opening the packaging, grasping the swab, swabbing the nostrils, placing swab in collection tube)
- 5. Was the swab collection completed correctly? (Y/N)

To participant: Can you tell me what it was like to use the swab in your nose?

6. Sum up participant response (e.g., "scary," "easy," "hard," "gross," "fun," etc.)_____

To participant: Can you tell me how it felt to use the swab in your nose?

7. Enter participant response

To participant: Was there anything that was hard to do?

8. Use participant response to answer the following question: Did the participant indicate difficulties completing the swab collection? (Y/N/Unsure)
à If yes During which task(s) did the participant indicate difficulty? (Opening the packaging, grasping the swab, swabbing the nostrils, placing swab in collection tube)

To participant: Do you think your friends in the same grade as you would be able to use the swab in their own nose?

9. Enter participant response (Y/N)

To participant: Can you pretend I've never used a swab in my nose and explain to me how to do it?

- 10. Did participant accurately explain all steps? (Y/N)
- 11. Record any other relevant comments from participant _____

Self-collection Instructional Handout: Images and Written Instructions

Step 1: Wash hands with soap and water, or use hand sanitizer.

Step 2: When instructed by your teacher to do so, open the tube containing the swab. Be sure to only touch the swab handle, not the soft tip of the swab. Do not let the swab touchanything. If the swab falls or touches anything prior to step 3, please let your teacher know and ask for a new swab.

Step 3: Gently insert the entire soft tip of the swab into one nostril, and rub the swab slowly in a circular motion around theinside wall of your nostril four times. The swab tip should be touching the inside wall of the nostril through each rotation. Repeat the same process with the same swab on the othernostril.

Step 4: Insert the swab back into the tube provided, or placethe swab into a container as directed by your teacher.

Self-collection Instructional Handout: Images

Step 1:

Clean Hands

Step 2:

Open Tube

Step 3:

Swab Front of Nose 4 Times on Each Side

Step 4:

Put Swab Back in Tub or Cup

Figure S1. RNase P RNA is detectable in anterior nares (AN) swabs from asymptomatic children with and without detectable SARS-CoV-2 RNA. A) DNase treatment of total nucleic acid eluates significantly increased RNase P Ct values (mean difference, 7.8 cycles; standard deviation, 1.2). B) RNase P RNA was detectable in all AN swabs, and RNase P Cts did not differ significantly between individuals with and without detectable SARS-CoV-2 RNA. C) No trend in RNase P Ct was observed based on SARS-CoV-2 Ct among samples with low (<24, ●), medium (24-32, ■), and high (>32, ▲) Ct values.

Figure S2. Collection of adequate specimens did not differ for self- and HCW-collected swabs in symptomatic children when tested for RNase P RNA. A) 2x2 comparison of qualitative RNase P RNA detection for self- and HCW-collected swabs. B) Adequacy of swab pairs by participant age. No significant differences in swab adequacy were observed between the age categories. C) RNase P Ct values for self- and HCW-collected swabs.

Figure S3. Comparison of self- versus HCW-collected nasal swab adequacy in asymptomatic children based on RNase P RNA detection. A) 2x2 comparison of qualitative RNase P RNA detection and **B**) distribution of RNase P Ct values for self- and HCW-collected swabs.
