

Supplementary figures

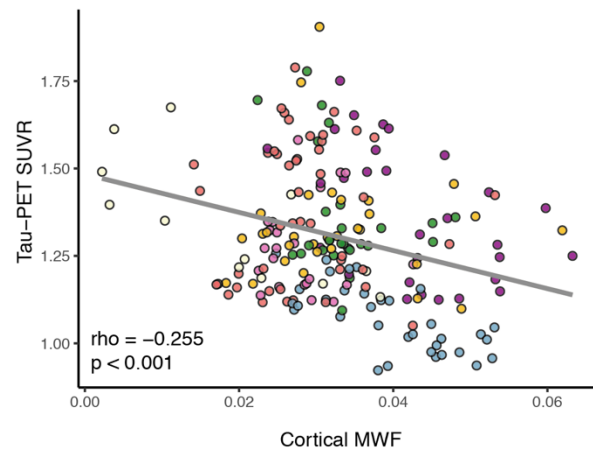

Supplementary figure 1: Brain renderings of cortical myelin within the MWF template and tau-PET scores among controls and AD participants.

Surface renderings of cortical myelin distribution derived from the MWF atlas of healthy individuals (A). Tau-PET scores averaged within controls (i.e. CN A β -/Tau-) and AD spectrum (A β + participants) and change in tau-PET scores averaged within the AD spectrum for ADNI (B) and BioFINDER-1 (C) cohorts.

A. ADNI

B. BioFINDER-1

Network: ● DAN ● DMN ● FPCN ○ Limbic ● Motor ● VAN ● Visual

Supplementary figure 2: Association between cortical MWF and baseline tau-PET SUVRs

Scatterplots showing the association between ROI levels of MWF and tau-PET SUVR for the AD spectrum ($A\beta^+$ participants) from the ADNI (A) and BioFINDER-1 (B) cohorts. The coloring indicates for each ROI the major functional network it belongs to. DAN = Dorsal Attention Network; DMN = Default-Mode Network; PFCN = Fronto-Parietal Control Network; VAN = Ventral Attention Network; MWF = Myelin Water Fraction.
