

## Supplementary material

**Supplementary Figure S1.** Demographics in the serological screening of population without registered SARS-CoV-2 infections: demographic parameters of participants found positive for anti-SARS-CoV-2 IgG in each investigated group compared to general demographic parameters of the group. Antibodies were identified in blood samples after separation of blood sera by clotting and centrifugation. Microblot-array testing was applied to determine IgG level in each participants and positive/negative result was qualified according to the validated test.

**Supplementary Figure S2.** Demographics in the serological screening of population without registered SARS-CoV-2 infections: demographic parameters of each investigated group compared to general demographic parameters of the whole country.

**Supplementary Figure S3.** Demographics in patients hospitalized due to COVID-19

**Supplementary Figure S4.** IgG specific to SARS-CoV-2 in non-vaccinated patients hospitalized due to COVID-19: female and male comparison. Anti-NCP- antibodies specific to nucleocapsid protein N, anti-RBD- antibodies specific to receptor binding domain within spike protein S1 region. Antibodies were identified in blood samples after separation of blood sera by clotting and centrifugation. Microblot-array testing was applied to determine IgG level (U/ml). Median values are presented (dash), with quartiles 1 and 3 (boxes), and minimum/maximum values (whiskers); p>0.05 by Welch test

**Supplementary Table S1.** Distributions of quantitative variables of measurements for IgG specific to SARS-CoV-2 NCP and RBD in: Group 1: anti-NCP IgG negative, non-vaccinated; Group 2: anti-NCP IgG negative, vaccinated; Group 3: anti-NCP IgG positive, non-vaccinated; Group 4: anti-NCP IgG positive, vaccinated. NCP – nucleocapsid protein, RBD – receptor binding protein

Group	Antibody	Date of the study	N	Min	Q25%	Median	Q75%	Max	Range	Average
1	NCP	May	38	0	0	5.211	17.27	107.3	107.3	13.11

	D90	7	915.3	944.6	959	977.6	988.7	957.9
Severe Anti-RBD	D10	5	0	27.71	138.9	718.7	972.5	326.3
	D15	7	0	92.36	936.4	1186	1250	760.6
	D30	4	1002	1002	1013	1078	1096	1031
	D90	4	906.8	909.3	940.2	967.3	968.6	938.9

Results are given as U/ml. Q25% and Q75% - 1. and 3. Quantile. Day 5.10.15.30.90 from the onset of the infection.

**Supplementary Table S3.** Number and percentage of smokers and allergies in studied groups.

	Group 1 (N=38) negative for anti- NCP IgG in May. non-vaccinated	Group 2 (N=29) negative for anti- NCP IgG in May. vaccinated	Group 3 (N=25) positive for anti- NCP IgG in May. non-vaccinated	Group 4 (N=17) positive for anti- NCP IgG in May. vaccinated
Allergy	11 (29%)	7 (24%)	4 (16%)	6 (35%)
Smokers	11 (29%)	7 (24%)	8 (32%)	3 (18%)

**Supplementary Table S4.** Distribution of BMI index in the study groups

	Min	Q1	Media n	Q3	Max	Mean	Std. Deviation	Std. Error of Mean
Group 1 (N=38) negative for anti-NCP IgG in May. non-vaccinated	19.05	21.92	25.57	29.36	35.32	25.84	4.58	0.74
Group 2 (N=29) negative for anti-NCP IgG in May. vaccinated	17.1	21.81	23.83	28.36	33.79	24.79	4.56	0.85
Group 3 (N=25) positive for anti-NCP IgG in May. non-vaccinated	20.29	22.81	27.77	30.2	35.16	27.05	4.59	0.92

Group 4 (N=17) positive for anti-NCP IgG in May. vaccinated								
	17.36	20.24	23.53	28.42	38.58	24.74	5.53	1.34
Q25% and Q75% - 1. and 3. Quantile								

**Supplementary Table S5.** T-test between each time point sample for anti-RBD IgG titres. P-values obtained for each set of groups were adjusted for multiple hypothesis.
