

Supplementary File

This file belongs to the article: “Subgrouping School-Aged Children on the Autism Spectrum Based on Co-Occurring Psychiatric Symptoms” (Piergies et al., *submitted*). It contains results from the four-class-solution latent class analysis which used all six *DSM*-Oriented Scales of the Child Behavior Checklist for Ages 6 to 18 as indicator variables and age and sex as covariates (Supplementary Table 1, Figure 1), frequency tables showing the number and percent of participants with histories of at least one of the medical conditions mentioned in our study (Supplementary Table 2, Table 3), additional goodness-of-fit criteria for the four-class-solution latent class analysis which used five *DSM*-Oriented Scales of the Child Behavior Checklist for Ages 6 to 18 as indicator variables and age and sex as covariates (Supplementary Table 4, Figure 2), results from a sensitivity analysis comparing fit indices between our three- and four-class models which used five *DSM*-Oriented Scales of the Child Behavior Checklist for Ages 6 to 18 as indicator variables and age and sex as covariates after 1,000 repetitions with a subset of 1,000 participants comprising the validation sample (Supplementary Figure 3), a graph illustrating the three-class model which used five *DSM*-Oriented Scales of the Child Behavior Checklist for Ages 6 to 18 as indicator variables and age and sex as covariates (Supplementary Figure 4), frequency tables showing endorsement rates ($\geq 1\%$) of conditions within medical condition categories and psychiatric symptom-based subgroups (Supplementary Tables 5, 6, and 7), and our manually-cleaned “current sleep duration” variable (Supplementary Table 8).
