

A forest plot with 'Study' on the y-axis. The first three rows show individual study results: Ward-Griffin (2018) - RCT (SMD = -0.09), Crossman (2015) (SMD = 0.56), and Banks (2018) (SMD = -0.10). The bottom row shows the 'Random effects model' estimate (SMD = 0.06). Each study's result is plotted with a grey diamond representing the SMD and horizontal error bars representing the 95% CI. A vertical dotted line at SMD = 0 indicates no effect. The x-axis ranges from -1.0 to 1.0. The 'Weight' for each study is listed to the right of the plot.

Study	N(i) N(c)				Standardised Mean Difference	SMD	95%-CI	Weight
	TE	seTE	Total	Total				
Ward-Griffin (2018) – RCT	-0.09	0.1280	122	124		-0.09	[-0.34; 0.16]	49.7%
Crossman (2015)	0.56	0.3080	22	22		0.56	[-0.04; 1.17]	23.0%
Banks (2018)	-0.10	0.2680	29	27		-0.10	[-0.63; 0.42]	27.3%
Random effects model			173	173		0.06	[-0.78; 0.90]	100.0%

Heterogeneity: $I^2 = 50\%$, $\tau^2 = 0.0513$, $p = 0.14$
