Database: WALTHAM Scientific Publications (accessible via <https://www.waltham.com/resources/waltham-publications/>)

Date searched: 17.06.2020

Number of hits: 31

Search Strategy:

All publications in the sub-section “Human animal interaction” were included.

Database: HABRI Central: Resources for the Study of the Human-Animal Bond (accessible via <https://habricentral.org/resources/>)

Date searched: 19.06.2020

Number of hits: 410

Search Strategy:

After several trial searches to see which search terms yielded the most relevant results, the website was searched using the search term “students”. The results were filtered to show only resources in the form of journal articles, reports and theses.

Database: Animals and Society Institute: Resources for Scholars and Researchers (accessible via <https://www.animalsandsociety.org/human-animal-studies/faculty/>)

Date searched: 20.06.2020

Number of hits: 95

Search Strategy:

On the website listed above, the sub-section “Society and Animals articles by topic”

(<https://www.animalsandsociety.org/human-animal-studies/society-and-animals-journal/society-animals-articles-by-topic/>) was searched for relevant literature. On the “Society and Animals articles by topic” website,

all articles listed under the topics “Animal-assisted activities” (20 results), “Benefits of animals to humans” (17 results), and “Dogs” (58 results) were included.

Explanations of the search history:

* truncation

Unlimited right-hand truncation searches for variations on a word that are formed with different suffixes. For example, a search for *gene** finds occurrences of *gene*, *genes*, *genetics*, and *generation*.

Words with a **slash at the end (/)** is MeSH – medical subject headings (controlled vocabulary).

ADJn is a positional operator that lets you retrieve records that contain your terms (in any order) within a specified number (n) of words of each other. To apply adjacency, separate your search terms with the ADJ operator and a number from 1 to 99. The ADJ operators finds two terms next to each other in the specified order. The ADJ1 operators finds two terms next to each other in any order. The ADJ2 operator finds terms in any order and with one word (or none) between them. The ADJ3 operator finds terms in any order with two words (or fewer) between them. The ADJ4 operator finds terms in any order and with three words (or fewer) between them, and so on.

Adj between words defines how many words (any words) there can be between two words. Adj means **0, zero** words between the two words (for example: dog assisted.tw,kf. = dog adj assisted.tw,kf.). **Adj1** means no words in between two other words, but the order of the words is interchangeable.

tw,kf = title field, abstract field or authors keyword field.
