

- Study title
- Study authors and year
- Study design
 - Study design (RCT or crossover RCT)
 - Type of publication (peer-reviewed journal article or undergraduate/postgraduate/doctoral dissertation)
- Participants
 - Gender
 - Age
 - Number of participants
 - Were sample size calculations conducted?
 - Study location
 - If applicable: pre-existing health condition
 - Were participants pet owners?
 - University degree (subject)
 - University level (Bachelor, Master, PhD)
 - Recruitment process
 - Eligibility criteria for participants
- Intervention
 - Randomization process into intervention and control groups
 - Differences between intervention and control group at baseline
 - Purpose of intervention (physical therapy/stress prevention/anxiety reduction etc.)
 - Was intervention an AAI program integrated in a pre-existing university program?
 - Number of participants in intervention condition
 - Animals in intervention condition
 - Type of animal
 - Breed of animal
 - Training level of animal
 - Number of animals present in intervention condition
 - If applicable: Person administering intervention (researcher, animal handler etc.)
 - If applicable: number of handlers present in intervention condition
 - Animal-to-participant ratio
 - Description of intervention condition
 - Type of activity (presence of animal, active interaction with animal etc.)
 - If applicable: measures used to induce stress among participants (test, interview etc.)
 - Setting of intervention condition
 - Format of intervention condition (groups, individual)
 - Timing of intervention (when in the semester did it take place? Beginning, middle, end, before exams, after exams?)
 - Duration of intervention condition
 - Number of intervention sessions per participant
 - Frequency of individual intervention sessions per participant
 - Duration of individual intervention sessions
- If applicable: Control
 - Number of control conditions
 - Number of participants in control condition(s)
 - Description of control condition(s)
 - Type of activity

- Setting of control condition
 - Format of control condition (groups, individual)
 - Timing of control (when in the semester did it take place? Beginning, middle, end, before exams, after exams?)
 - Duration of control condition
 - Number of control sessions per participant
 - Frequency of individual control session per participant
 - Duration of individual control session
- Outcomes
 - Quantitative outcomes
 - Outcomes assessed
 - Measures used to assess outcomes
 - Timing of outcome assessments (baseline, immediate at the start of/during intervention, immediately following intervention, long-term)
 - Statistical test used
 - Results from quantitative outcome assessment
 - If available: effect size (Hedge's g) and corresponding SE
 - P-value
 - If applicable: other relevant outcomes from sub-group analyses
 - Qualitative outcomes
 - Outcomes assessed
 - Measures used to assess outcomes
 - Timing of outcome assessments (baseline, immediate at the start of/during intervention, immediately following intervention, long-term)
 - Results from qualitative outcome assessment
