

Table S5: Average marginal treatment effects based on interaction with age category with respect to selecting the intent option for definitely accepting the COVID-19 vaccine, and agreeing to recommend the vaccine to healthy adults, elderly, and people with pre-existing health conditions; in each experimental arm relative to control arm.

	Intention to vaccinate	Healthy adults	Elderly	Health condition
	Marginal effects [95% Confidence Interval]	Marginal effects [95% Confidence Interval]	Marginal effects [95% Confidence Interval]	Marginal effects [95% Confidence Interval]
