

Supplementary Methods

While no assumptions of causal relationships are required, we restricted the model space to disallow causal paths that made no sense for our study: (1) *sex* could only cause other variables and not be caused by any other variable, (2) *age* at testing could be caused by *sex* but no other variable, (3) the seven variables for antibiotics given in the previous year could only be caused by *age* and *sex* and no other variable, (4) *days hospitalized* the prior year could not be caused by presence of nosocomial infection but could be caused by any other variable, (5) *nosocomial* infection could not be caused by resistance to any drug but can be caused by any other variable; (6) *polymicrobial* cultures as well as all drug antibiotic resistance tests could be caused by any of the variables; (7) the six medical conditions can be caused by *age* and *sex*; (7) *immunosuppression* and *CRF* can be caused by any of the other medical conditions; (8) high *BMI* can only be caused by one of the other medical conditions, *dementia*; (9) *dementia*, *diabetes*, and *COPD* can be caused by each other or high *BMI* but not *immunosuppression* and *CFR*; and (10) high *BMI* can only be caused by *dementia* but not the other 4 medical conditions. In addition, no causal paths were forced to be in the model.

Supplementary Results

Table S1: Antibiotic resistance tests excluded from analysis due to redundancies or missing data, along with their tetrachoric correlations with highly-correlated included variables

Dataset	Antibiotic removed	Antibiotics it is correlated with	Tetrachoric correlation range
<i>E.coli</i>	AMP	CAZ, CRO, CXM, LEX	0.80 - 0.93
<i>E.coli</i>	CRO	CAZ	1.00
<i>E.coli</i>	CXM	CAZ	0.99 - 1.00
<i>E.coli</i>	LEX	CAZ	0.98 - 0.99
<i>K. pneumoniae</i>	AMC	CAZ, CIP, CRO, CXM, GEN, LEX, TZP	0.70 - 0.99
<i>K. pneumoniae</i>	CIP	OFX	0.89 - 1.00
<i>K. pneumoniae</i>	CRO	CAZ	0.98 - 1.00
<i>K. pneumoniae</i>	CXM	CAZ	0.99 - 1.00
<i>K. pneumoniae</i>	LEX	CAZ	0.98 - 0.99
<i>P. aeruginosa</i>	CIP	GEN	0.88 - 0.98
<i>P. aeruginosa</i>	PIP	CAZ, TZP	0.90 - 0.99
<i>P. aeruginosa</i>	IPM	MEM	0.94 - 0.99
<i>P. mirabilis</i>	AMP	CRO, CXM, GEN	0.87 - 1.00

<i>P. mirabilis</i>	CAZ	CRO, CXM	0.97 - 1.00
<i>P. mirabilis</i>	CIP	OFX	0.97 - 1.00
<i>P. mirabilis</i>	LEX	CRO, CXM	0.97 - 1.00
<i>S. aureus</i>	CIP	OXA	0.86 - 0.96
<i>S. aureus</i>	ERY	CLI	0.98 - 0.99

Note: AMC, amoxicillin/clavulanate; AMP, ampicillin; CAZ, ceftazidime; CIP, ciprofloxacin; CLI, clindamycin; CRO, ceftriaxone; CXM, cefuroxime; ERY, erythromycin; Fusid, fusidic acid; GEN, gentamicin; IPM, imipenem; LEX, cefalexin; MEM, meropenem; MUP, mupirocin; OFX, ofloxacin; OXA, oxacillin; PIP, piperacillin; SXT, sulfamethoxazole/trimethoprim, TZP, piperacillin/tazobactam.

Table S2: The maximum number of parents sufficient to reach the maximum likelihood, the number of arcs in this model, and the number of arcs present in at least 50% of the simulations, representing the final models presented, for each of the 5 bacteria analyzed.

Bacteria	Site	Max parents needed	Initial # of arcs	Arcs in 50% of simulations
<i>E coli</i>	Urine	7	42	39
	Wound	5	26	26
	Aerobic blood	6	19	17
<i>K pneumoniae</i>	Urine	5	22	22
	Wound	3	11	11
	Aerobic blood	3	9	9
<i>P aeruginosa</i>	Urine	6	19	18
	Wound	4	17	16
	Sputum	5	18	18
<i>P mirabilis</i>	Urine	4	17	17
	Wound	4	18	18
	Aerobic blood	2	7	4
<i>S aureus</i>	Wound	4	26	25
	Aerobic blood	2	8	7

*Maximum number of parents allowed

Note: Initial number of arcs is for models where variables have been removed due not being connected to the resistance variables, or in the case of Ecoli urine, variables removed to allow models to run within a reasonable (2 weeks) amount of time.

Figure S1: Final DAG for *E. coli* in urine.

Table S3: *E. coli* in urine parameter estimates and their 95% credible intervals. None of the non-intercept credible intervals contains zero.
