

Supplementary materials

Supplementary Figure 1: Chemical degradation of pheomelanin and eumelanin in the SN. HI reduction produces 4-AHP and 4-AHPEA, markers for DOPA pheomelanin and DA pheomelanin, respectively. H₂O₂-K₂CO₃ oxidation (AHPO) produces PTCA, a marker for DOPA eumelanin, PDCA, a marker for DA eumelanin, and TTCA, a marker for DA pheomelanin.
