

Supplemental Table 2. Kidney and Liver Cystic Phenotypes of *ALG8* P/LP PTV heterozygotes and matched related non-heterozygotes with CT or MRI imaging

	All P/LP Variant heterozygotes (n=36)	Related non-heterozygotes (n=24)	P value
≥ 4 kidney cysts	12 (41.4)	2 (6.9)	0.005
≥ 4 kidney cysts or TSTCs	19 (65.5)	5 (17.2)	<0.001
Bilateral kidney cysts	17 (58.6)	4 (13.8)	0.001
Bilateral kidney cysts or TSTCs	21 (72.4)	7 (24.1)	0.001
Liver cysts	2 (6.9)	2 (6.9)	1.0
Liver cysts or TSTCs	8 (27.6)	4 (13.8)	0.3
Nephrolithiasis	14 (48.3)	9 (31.0)	0.3

Heterozygotes were matched 1:1 to individuals in the non-heterozygote relative cohort by age sextile, sex, and imaging modality (CT with IV contrast (n=25 pairs); CT without IV contrast (n=4 pairs))
