

Supplementary Online Content

Mid-life leukocyte telomere length and dementia risk: a prospective cohort study of 435,046 UK Biobank participants

Supplement 1

Table 1 Genetic instruments selected for Mendelian randomization analyses

Modified table based on Supplementary Table 1 of Codd et al. (Nature Genetics 2021)

A1 is the effect allele, A2 the other allele

N\_imp is the sample size multiplied by the imputation quality to indicate approximate sample size for the test.

Beta is the estimated mean standard deviation change in leukocyte telomere length per copy increase in the effect allele.

SE is the standard error of beta.

F=(Beta/SE)<sup>2</sup>

%var explained is the percent of variance explained by a particular genetic variant.
