

Appendix 3

Conceptual depth scale

Nelson's 5-point conceptual depth scale (Nelson, 2017) and our quality self-assessment.

Criteria	Our assessment
Range	A wide range of codes. Data source is quite uniform (interviews of operating room staff).
Complexity	Quite a complex initial coding tree as shown in the figures.
Subtlety	We have taken a rich interpretation of the language used by participants particularly for the themes on psychological safety and leadership.
Resonance	We have engaged extensively with the literature.
Validity	We have not performed interviews with staff from other hospitals to check the 'external' applicability of themes.
