Appendix S1. Deviations from the REPRISE project protocol

Original plan	Revised plan	Reason for modification
We will use risk ratios with 95% confidence intervals to examine differences in percentages of each indicator between reviews in different categories (e.g. 2020 versus 2014 reviews).	When the numerators were small (<5) in either group, or the outcome was very rare (<5%) in either group, rather than using risk ratios, we instead used penalised likelihood logistic regression and generated odds ratios.	Penalised likelihood logistic regression has been shown to improve estimation of the risk ratio and its confidence interval for rare events or unbalanced samples. The odds ratios from these models can be interpreted as risk ratios when the events are rare in both groups.
We will use risk ratios with 95% confidence intervals to examine differences in percentages of each indicator between reviews published in journals with versus without a mandatory data or code sharing policy	We will use risk ratios with 95% confidence intervals to examine differences in percentages of each indicator between reviews published in journals with versus without a policy that mandates either data sharing or declaration of data availability.	Too few journals had a policy that mandated data sharing, so we expanded this category to those journals which mandated inclusion of a data availability statement.
We did not plan to define an equivalence range to interpret risk ratio associations.	We defined an equivalence range for all comparisons as 0.9 to 1.1 – any risk ratio less than 0.9 or more than 1.1 was deemed as an important difference.	We set an equivalence range in this paper because there are so many statistical tests being undertaken. With all these tests, there is a temptation to focus on those that are statistically significant, even if unimportant.
We did not plan to conduct any sensitivity analyses.	We conducted two post-hoc sensitivity analyses, the first by excluding Cochrane reviews, and the second by excluding reviews on COVID-19.	We excluded Cochrane reviews because they are subjected to strict editorial processes to ensure adherence to methodological conduct and reporting standards (unlike systematic reviews published in other journals). We excluded reviews focusing on COVID-19 due to concerns about short publication turnarounds, which could have an impact on reporting quality.

Appendix S2. Eligibility criteria for study inclusion

Title and abstract screening
1. Based on the title/abstract, the article appears to be a completed systematic review with meta-analysis of studies (i.e. not a protocol for a systematic review, nor a systematic review without meta-analysis, nor an overview of systematic reviews, nor a scoping review); and
2. The article appears to have compared the effects of at least two health, social, behavioural or educational interventions applied to humans. That is, any intervention designed to improve health (“a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity”), promote social welfare and justice, change behaviour, or improve educational outcomes.
Full-text screening
1. The article was written in English; and
2. The review objective or question was clearly stated in the Introduction or Methods section; and
3. The source(s) used to search for studies were reported; and
4. Methods used to assess validity of the findings of the included studies (e.g. risk of bias assessment, methodological quality assessment) were reported in the Methods or Results section; and
5. The review included randomised or non-randomised studies (or both) comparing the effects of at least two health, social, behavioural or educational interventions designed to improve health, promote social welfare and justice, change behaviour, or improve educational outcomes in humans. That is, any intervention designed to improve health (“a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity”), promote social welfare and justice, change behaviour, or improve educational outcomes.
6. References to all studies included in the review were cited, either in the standard reference list or in a supplementary file (full bibliographic citations of included studies must have been presented for the systematic review to be considered eligible).
7. The review presented at least one pairwise meta-analysis of aggregate data, including at least two studies, using any effect measure (e.g. mean difference, risk ratio). Network meta-analyses were eligible if they included at least one direct (i.e. pairwise) comparison that fulfilled the abovementioned criterion. Meta-analyses of individual participant data were excluded.

Appendix S3. Search strategy

All searches were run on December 3rd, 2020.

Section 1. General characteristics

Item	Response option
Record ID:	Free text
Systematic review ID (surname year):	Free text
Enter initials of data collector:	Free text
Specify the title of the systematic review:	Free text
Specify the journal:	Free text
Specify the full name of the corresponding author of the systematic review:	Free text
Specify the email address of the corresponding author of the systematic review:	Free text
Specify the country of the corresponding author of the systematic review:	Free text
What was the source of funding for the systematic review?	<input type="radio"/> Non-profit (e.g. government, university/hospital/research institute, charitable foundation) <input type="radio"/> For-profit (e.g. pharmaceutical company) <input type="radio"/> Both non-profit and for-profit <input type="radio"/> Unclear if the funder is for-profit or non-profit (please specify funder): _____ <input type="radio"/> Authors specified there was no funding for the systematic review <input type="radio"/> Not reported
Did any of the systematic reviewers disclose financial conflicts of interest?	<input type="radio"/> Conflict of interest present (i.e. at least one systematic reviewer reported a financial conflict of interest of any type) <input type="radio"/> No conflict of interest (i.e. all systematic reviewers stated they had no financial conflicts of interest) <input type="radio"/> Missing (i.e. no disclosure statement)
Specify the total number of studies included in the systematic review:	Numeric
Specify the type of participant(s) indicated in the review objective(s) or question(s) (e.g. adults with lung cancer, children with asthma, university students)	Free text
What is the broad ICD-11 category investigated in this systematic review?	<input type="radio"/> Not applicable <input type="radio"/> 01 Certain infectious or parasitic diseases <input type="radio"/> 02 Neoplasms <input type="radio"/> 03 Diseases of the blood or blood-forming organs

	<ul style="list-style-type: none"> O 04 Diseases of the immune system O 05 Endocrine, nutritional or metabolic diseases O 06 Mental, behavioural or neurodevelopmental disorders O 07 Sleep-wake disorders O 08 Diseases of the nervous system O 09 Diseases of the visual system O 10 Diseases of the ear or mastoid process O 11 Diseases of the circulatory system O 12 Diseases of the respiratory system O 13 Diseases of the digestive system O 14 Diseases of the skin O 15 Diseases of the musculoskeletal system or connective tissue O 16 Diseases of the genitourinary system O 17 Conditions related to sexual health O 18 Pregnancy, childbirth or the puerperium O 19 Certain conditions originating in the perinatal period O 20 Developmental anomalies O 21 Symptoms, signs or clinical findings, not elsewhere classified O 22 Injury, poisoning or certain other consequences of external causes O 23 External causes of morbidity or mortality O 24 Factors influencing health status or contact with health services
<p>Specify the type of intervention(s) indicated in the review objective(s) or question(s) (e.g. inhaled corticosteroids, provision of charity or welfare, use of bystander programs, reduction in class size) [Select all that apply]:</p>	<ul style="list-style-type: none"> <input type="checkbox"/> Health (i.e. any intervention designed to improve “health” defined as a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity) <input type="checkbox"/> Behavioural (i.e. any intervention designed to increase useful behaviours and reduce or eliminate harmful behaviours, such as modelling, prompting, reinforcement, or shaping behaviours) <input type="checkbox"/> Educational (i.e. any intervention designed to provide students with the support needed to acquire the skills being taught by an educational system) <input type="checkbox"/> Social (i.e. any intervention of a government or an organization in social affairs, such as provision of charity or social welfare as a means to alleviate social and economic problems of people facing financial difficulties; provision of safety regulations for employment and products; delivery of food aid, food bank or recovery missions to regions or countries negatively affected by an event; securing workers’ rights through gradualism in institutions, private education and unions)
<p>Is/are the intervention intervention(s) indicated in the review objective(s) or question(s) pharmacological or non-pharmacological?</p>	<ul style="list-style-type: none"> O Pharmacological

	<p><input type="radio"/> Non-pharmacological (i.e. any intervention that does not involve drugs, e.g. device, vitamin, diet, psychotherapy, physical therapy, welfare, organization change, education)</p> <p><input type="radio"/> Both pharmacological and non-pharmacological</p>
Notes	Free text

Section 2. Transparency characteristics

Item	Response option
Did the authors state that the systematic review was reported in accordance with a reporting guideline (e.g. PRISMA, MOOSE, MECIR, MARS, ROSES)?	<input type="radio"/> Yes <input type="radio"/> No
Is a protocol or registration record for the systematic review cited within the review?	<input type="radio"/> Both a protocol and registration record are cited <input type="radio"/> Only a protocol is cited <input type="radio"/> Only a registration record is cited <input type="radio"/> Neither are cited
Did the authors specify any eligibility criteria for the following components of the review question [Select all that apply]?	<input type="checkbox"/> Participants <input type="checkbox"/> Interventions/exposures <input type="checkbox"/> Comparators <input type="checkbox"/> Outcomes
Did the authors make a statement regarding eligibility of studies based on study design?	<input type="radio"/> Yes <input type="radio"/> No
[If “Yes” to the previous question] Specify the type of study design(s) eligible for inclusion in the systematic review:	<input type="radio"/> Randomised trial <input type="radio"/> Non-randomised study (e.g. cohort study, case-control study) <input type="radio"/> Both randomised trials and non-randomised studies
How many bibliographic databases were searched? [note: trials registers (e.g. WHO ICTRP, ClinicalTrials.gov) are not applicable to this question]	Numeric
Copy and paste verbatim the list of databases searched:	Free text
Was the interface or platform through which the bibliographic database was searched reported for any database (e.g. did the authors specify that MEDLINE was searched via Ovid, or that CINAHL was searched via EBSCOhost)?	<input type="radio"/> Fully – interface or platform reported for all databases <input type="radio"/> Partially – interface or platform reported for only some databases <input type="radio"/> No – not reported for any database

Were the years of coverage reported for any bibliographic database searched?	<input type="radio"/> Fully – both start and end exact dates were reported [Select this option if both dates are reported, or if reviewers placed no limit/restriction on the start date and reported the date the search was conducted] <input type="radio"/> Partially – both start and end dates were reported, but not as exact dates (e.g. MM/YY or WW/MM) <input type="radio"/> Partially – only the start date or only the end date (e.g. "we searched all databases on 23 May 2019" or "we searched all databases from inception to current") <input type="radio"/> Not reported
Did the authors specify the exact date when each bibliographic database was last searched?	<input type="radio"/> Yes <input type="radio"/> No
Was the full search strategy or search terms used in the bibliographic databases reported?	<input type="radio"/> Yes – Full Boolean search logic was reported for all databases <input type="radio"/> Yes – Full Boolean search logic was reported for only some databases <input type="radio"/> Yes – Only main index terms (e.g. MeSH terms) used in the search strategy were reported <input type="radio"/> Yes – Only free text terms used in the search strategy were reported <input type="radio"/> No – Authors did not report any search strategy or search terms
Did the authors report searching a trials register (e.g. ClinicalTrials.gov, WHO International Clinical Trials Registry Platform)?	<input type="radio"/> Yes <input type="radio"/> No
Did the authors report searching any other electronic source (e.g. Google Scholar, organisation websites, journal websites)?	<input type="radio"/> Yes <input type="radio"/> No
If yes to the previous question, was the search logic that was used to search each of these sources reported?	<input type="radio"/> Fully – Search logic reported for all these sources <input type="radio"/> Partially – Search logic reported for only some of these sources <input type="radio"/> No – Search logic not reported for any of these sources
What method of study selection did the authors report using?	<input type="radio"/> All identified studies screened by at least two authors <input type="radio"/> All identified studies screened by one author, with a sample screened by another <input type="radio"/> At least two authors were involved in either titles/abstracts or full-text screening, but authors did not specify for the remaining step

	<input type="radio"/> All identified studies screened by only one author <input type="radio"/> Different methods were applied for titles/abstracts and full-text screening <input type="radio"/> Not reported/unclear
What method of data extraction did the authors report using?	<input type="radio"/> All data extracted by at least two authors <input type="radio"/> All data extracted by one author, with verification by another <input type="radio"/> All data extracted by only one author <input type="radio"/> Other (please specify): _____ <input type="radio"/> Not reported/Unclear
What method of risk of bias (or quality) assessment did the authors report using?	<input type="radio"/> All included studies assessed by at least two authors <input type="radio"/> All included studies assessed by one author, with verification by another <input type="radio"/> All included studies assessed by only one author <input type="radio"/> Other (please specify): _____ <input type="radio"/> Not reported/Unclear
Did the authors present data on risk of bias (or quality) for each item on a per-study basis (e.g. presented a table or figure displaying how each study was rated on each of the risk of bias (or quality) items)?	<input type="radio"/> Yes <input type="radio"/> No
Which statistical software was used to perform meta-analyses [Select all that apply]?	<input type="checkbox"/> R <input type="checkbox"/> Stata <input type="checkbox"/> RevMan <input type="checkbox"/> Comprehensive Meta-Analysis (CMA) <input type="checkbox"/> SAS <input type="checkbox"/> SPSS <input type="checkbox"/> Other (please specify) <input type="checkbox"/> Not reported
Did the authors report which statistical package(s) were used (e.g. metan in Stata, metafor in R) and the version number of the package(s)?	<input type="radio"/> Both the statistical package(s) and software version number(s) were reported <input type="radio"/> Only the statistical package(s) were reported

	<input type="radio"/> Only the software version number(s) were reported <input type="radio"/> Neither were reported
Did the authors report the total number of records identified through all searches?	<input type="radio"/> Yes <input type="radio"/> No
Did the authors report the number of records identified through each database/source (e.g. indicated that the search of MEDLINE identified 1000 records, Embase identified 1300 records, CENTRAL identified 750 records, etc.)?	<input type="radio"/> Yes <input type="radio"/> No
Did the authors cite any full text articles that were screened and excluded from the review?	<input type="radio"/> Yes <input type="radio"/> No
<p>Answer the following questions for only one meta-analysis per review (the index meta-analysis)</p> <p>Select first reported meta-analysis. Note that the first meta-analysis may be identified from the Abstract or Results section of the review, depending on where it is first reported in the publication.</p>	
What is the outcome domain (e.g. all-cause mortality, anxiety)?	Text
How many studies were included in the meta-analysis?	Numeric
What was the effect measure for the meta-analysis?	<input type="radio"/> Risk ratio <input type="radio"/> Odds ratio <input type="radio"/> Hazard ratio <input type="radio"/> Risk difference <input type="radio"/> Mean difference <input type="radio"/> Standardized mean difference <input type="radio"/> Other (please specify): _____ <input type="radio"/> Not reported

Did the authors describe any methods required to prepare the data for the meta-analysis, such as handling of missing summary statistics, or data conversions?	<input type="radio"/> Yes <input type="radio"/> No
Did the authors specify the meta-analysis model used (e.g. fixed-effect, random-effects)? [Note: such information may appear in the Methods section or on the forest plot]	<input type="radio"/> Yes <input type="radio"/> No
Did the authors specify the meta-analysis method used (e.g. Mantel-Haenszel, inverse-variance)? [Note: such information may appear in the Methods section or on the forest plot]	<input type="radio"/> Yes <input type="radio"/> No
Did the authors specify the between-study (heterogeneity) variance estimator used (e.g. DerSimonian and Laird, restricted maximum likelihood (REML)? [Note: Such information may appear in the Methods section or on the forest plot. Only answer as “Yes” if the estimator was reported explicitly. Answer as “No” if the estimator was not reported explicitly, even if you can guess the estimator from the software used (e.g. because the software implements only one option)]	<input type="radio"/> Yes <input type="radio"/> No <input type="radio"/> Not applicable – not a random-effects meta-analysis
Were summary statistics for each included study reported in a table, figure, or text? By “summary statistics”, we mean the mean, standard deviation and sample size for continuous outcomes, or the number of events and sample size for binary outcomes.	<input type="radio"/> Yes <input type="radio"/> No
Were effect estimates and measures of precision of each included study reported in a table, figure, or text? [Notes: By “effect estimate”, we mean a point estimate of the intervention effect, such as a mean difference for continuous outcomes, or a risk ratio, odds ratio or risk difference for binary outcomes. By “measure of precision”, we mean a standard error or confidence interval.]	<input type="radio"/> Yes <input type="radio"/> No
Is there a data or code availability statement in the paper?	<input type="radio"/> Yes <input type="radio"/> No

<p>If yes to the previous question, copy and paste the data and code statement(s) verbatim:</p>	<p>Free text</p>
<p>Have the authors made any of the following publicly accessible, either as a supplementary file or file uploaded to a general-purpose repository (e.g. Open Science Framework, Zenodo, GitHub) or institutional repository? [Select all that apply. Only select each if you are able to locate the relevant material, after searching all supplementary materials or links to shared materials]</p>	<p><input type="checkbox"/> Template data collection form(s)</p> <p><input type="checkbox"/> File(s) containing (unprocessed) data extracted from included studies</p> <p><input type="checkbox"/> File(s) indicating any necessary data conversions performed</p> <p><input type="checkbox"/> File(s) containing data used in all analyses (e.g. Microsoft Excel or CSV spreadsheet, or RevMan file containing all study effect estimates included in meta-analyses)</p> <p><input type="checkbox"/> Analytic code used to generate results (i.e. the sequence of commands used within a software package to manage and analyse data)</p> <p><input type="checkbox"/> File(s) containing citations of all records that were screened and excluded</p> <p><input type="checkbox"/> Metadata which describes the contents of the shared file(s) to aid interpretation and reuse (e.g. a file with complete descriptions of variable names, or README files describing each file shared)</p>
<p>If yes to any of the materials selected, how was the material shared publicly? [Select all that apply]</p>	<p><input type="radio"/> Uploaded as a supplementary file on the journal website</p> <p><input type="radio"/> Uploaded to a general-purpose open-access repository (e.g. Open Science Framework, Zenodo, GitHub) (please specify)</p> <p><input type="radio"/> Uploaded to an institutional repository</p> <p><input type="radio"/> Uploaded to my personal website</p> <p><input type="radio"/> Other (please specify): _____</p>
<p>If yes to any of the materials selected, are any of the data file(s) associated with a persistent identifier (e.g. DOI)?</p>	<p><input type="radio"/> Yes</p> <p><input type="radio"/> No</p> <p><input type="radio"/> Unsure</p>
<p>If yes to any of the materials selected, was a license applied to any of the data file(s) (e.g. CC BY, CC BY-NC)?</p>	<p><input type="radio"/> Yes</p> <p><input type="radio"/> No</p> <p><input type="radio"/> Unsure</p>
<p>Notes</p>	<p>Free text</p>

Section 3. Journal characteristics.

1. Journal name (Abbreviated)	Free text
2. Number of studies published under this journal	Numeric
3. Does this journal only publish evidence syntheses (reviews, meta-analyses and their protocols)?	<input type="radio"/> Yes <input type="radio"/> No
“Instruction for Authors” Section	
4. Does this journal indicate a data or code sharing policy (or both) under instructions to authors or submission guidelines?	<input type="radio"/> Yes – The journal encourages or mandates that authors of all research articles (or systematic reviews in particular) share their data or analytic code when they submit an article, as specified in the journal instructions to authors or submission guidelines <input type="radio"/> No - No such policy can be located in the journal instructions to authors or submission guidelines
5. (If yes to Q4) Copy policy text verbatim	Free text
6. (If yes to Q4) What is the expectation for authors regarding sharing of data and materials (including analytic code)?	<input type="radio"/> Encouraged: both sharing of data and/or analytic code and the Data Availability Statement are not mandatory for publication by the journal <input type="radio"/> Expected: sharing data and/or analytic code is not mandatory for publication of systematic reviews, but a Data Availability Statement, which contains links to shared data or reasons for not sharing data, must be provided. <input type="radio"/> Mandatory: sharing data and/or analytic code is a condition of publication of systematic reviews by the journal;

Note:

* For journals with a data policy, we used the Wayback Machine tool (<https://web.archive.org/>) to search for web archives of the Author Instructions page on each journal's website, and recorded the type of data policy based on the version published prior to 1 November 2020.

**If no archived version of the Author Instructions page prior to 1 November 2020 was found, we recorded the type of data policy based on the earliest version available and verified that the publisher announced the rollout of a universal data policy prior to 1 November 2020 (which supports our assumption that the data policy of the journal had already been in place before 1 November 2020).

Appendix S6: Comparison between reviews of health interventions in 2014 vs 2020

Item	Median (IQR) or Frequency (%)	
	2020* (N=294)	2014 (N=110)
Number of databases searched	4 (3-5)	4 (3-5)
Number of studies included in review	13 (8-21)	13 (7-23)
Number of studies in index meta-analysis	6 (4-10)	6 (3-11)
Country of corresponding author		
China (2014) China (2020)	95/294 (32)	23/110 (21)
UK (2014) USA (2020)	29/294 (10)	17/110 (15)
Canada (2014) UK (2020)	24/294 (8)	15/110 (14)
Other	146/294 (50)	55/110 (50)
Cochrane reviews	8/294 (3)	32/110 (29)
Source of funding		
Author reported funding	115/294 (39)	60/110 (55)
Author reported no funding	95/294 (32)	12/110 (11)
Not reported	84/294 (29)	38/110 (35)
Conflict of interest declared	276/294 (94)	103/110 (94)
Area(s) of intervention		
Pharmacological	102/294 (35)	55/110 (50)
Non-pharmacological	183/294 (62)	43/110 (39)
Both	9/294 (3)	12/110 (11)
ICD-11 category investigated		
Endocrine, nutritional or metabolic diseases (2020)		
Diseases of the digestive system (2014)	36/294 (12)	14/110 (13)
Diseases of the digestive system (2020)		
Infectious or parasitic diseases (2014)	36/294 (12)	13/110 (12)
Diseases of the musculoskeletal system (2020)		
Diseases of the circulatory system (2014)	35/294 (12)	13/110 (12)
Diseases of the circulatory system (2020)		
Neoplasms (2014)	30/294 (10)	11/110 (10)
Other	157/294 (53)	59/110 (54)
Citing a reporting guideline	242/294 (82)	32/110 (29)
Protocol/registration record cited		
Both protocol and registration record cited	1/294 (<0.5)	4/110 (4)
Only a protocol cited	12/294 (4)	32/110 (29)
Only a registration record cited	110/294 (37)	2/110 (2)
Neither	171/294 (58)	72/110 (65)
Type(s) of eligible study design stated	272/294 (93)	104/110 (95)
Randomised studies	164/272 (60)	71/110 (65)
Non-randomised studies	20/272 (7)	7/110 (6)
Both	88/272 (32)	32/110 (29)
Dates of coverage of databases reported		
Both start and end dates	134/294 (46)	77/110 (70)
Either start or end date only	152/294 (52)	29/110 (26)
Not reported	8/294 (3)	4/110 (4)
Boolean search strategy reported for at least 1 database	211/294 (72)	60/110 (55)
Trials register searched	63/294 (21)	38/110 (35)

Item	Median (IQR) or Frequency (%)	
	2020* (N=294)	2014 (N=110)
Other electronic sources searched	97/294 (33)	101/110 (92)
Method of study screening reported	228/294 (78)	85/110 (77)
Method of data collection reported	227/294 (77)	84/110 (76)
Method of ROB assessment reported	181/294 (62)	63/95 (66)
Total records retrieved reported	294/294 (100)	91/110 (83)
Software(s) used for meta-analysis		
R	33/294 (11)	7/110 (6)
Stata	73/294 (25)	16/110 (15)
Review Manager	185/294 (63)	80/110 (73)
Comprehensive Meta-Analysis	25/294 (9)	6/110 (5)
SAS	1/294 (<0.5)	2/110 (2)
SPSS	3/294 (1)	4/110 (4)
Other	13/294 (4)	12/110 (11)
Not reported	3/294 (1)	1/110 (1)
Sharing of data or materials used in analyses	19/294 (6)	33/110 (30)
Index meta-analysis		
Measure of effect used		
Risk ratio	70/294 (24)	36/110 (33)
Odds ratio	70/294 (24)	20/110 (18)
Hazard ratio	13/294 (4)	6/110 (5)
Risk difference	3/294 (1)	2/110 (2)
Mean difference	76/294 (26)	25/110 (23)
Standardised mean difference	60/294 (20)	10/110 (9)
Other	2/294 (1)	11/110 (10)
Method of data preparation reported	100/294 (34)	17/110 (15)
Meta-analysis model reported (e.g. fixed-effects, random-effects)	289/294 (98)	106/110 (96)
Summary statistics reported for each study	211/294 (72)	79/110 (72)
Effect estimate and measure of precision reported for each study	282/294 (96)	101/110 (92)

*The 2020 sample only includes reviews of health interventions.

Figure S1: Sensitivity analysis – Frequency of reporting items between systematic reviews published in 2014 and 2020

Figure S2A: Sensitivity analysis – Relationship between citation of reporting guidelines and reported items

Figure S2B: Sensitivity analysis – Relationship between citation of reporting guidelines and reported items (ctn'd)

Figure S3: Relationship between journal's presence of a data sharing policy and reported items
