

## Supplementary results for the manuscript

“Global spatiotemporal trends and determinants of COVID-19 vaccine acceptance on Twitter: a multilingual deep learning study in 135 countries and territories.”

### Supplementary material I section II: Supplementary Results

#### Table of contents:

Table S5. Twitter users count, sorted by the number of tweets.....	2
Figure S2. Spatiotemporal trends of tweet count.....	3
Figure S3. Regional variations in COVID-19 vaccine acceptance, vaccine confidence, information environment, and prevalence of vaccine access-related discourse among Twitter users, November 13, 2020 – March 5, 2022.....	4
Figure S4. Multilevel regression coefficients between COVID-19 vaccine acceptance on Twitter and COVID-19 vaccine uptake in each month.....	5
Table S6. Association between Twitter users’ acceptance and coverage of COVID-19 vaccination (n=131 countries or territories).....	6
Figure S5. Regional weekly-level trends of COVID-19 vaccine acceptance, vaccine confidence, information environment, and prevalence of vaccine access-related discourse among Twitter users, November 13, 2020 – March 5, 2022.....	7
Figure S6. Weekly-level trends of weighted COVID-19 vaccine acceptance among Twitter users in 26 countries, November 13, 2020 – March 5, 2022.....	8
Figure S7. Global trends on vaccine adverse event, January 2004 - February 2022.....	9
Figure S8. Weekly trends of 12 AEFI-related Google Trends topics in 26 countries or territories, November 2020 – February 2022.....	10

## Section II: Supplementary Results

**Table S5.** Twitter users count, sorted by the number of tweets.

<i>number of tweets</i>	<i>number of users</i>	<i>percentage</i>
1	2320786	69.40%
2	486,166	14.54%
3	192,091	5.74%
4	100,228	3.00%
5	59,471	1.78%
6	39,208	1.17%
7	27,188	0.81%
8	20,478	0.61%
9	15,341	0.46%
10	11,710	0.35%
11-20	47,437	1.42%
21-30	12,368	0.37%
31-40	4,908	0.15%
41-50	2,460	0.07%
51-100	3,450	0.10%
$\geq 101$	854	0.03%
<i>sum</i>	3,344,144	100.00%

The table above illustrates how many human-generated tweets were sent by each user. Overall, 7,047,223 tweets analysed in this study were sent by a total of 3,344,144 users. The majority of the users (69.40%,  $N_{\text{user}} = 2,320,786$ ) only sent one tweet and most users (97.86%,  $N_{\text{user}} = 3,272,66$ ) sent less than 10 tweets. However, there are still 854 users who sent over 100 tweets.

**Figure S2.** Spatiotemporal trends of tweet count.

**Figure S2a.** Daily number of human-generated tweet.

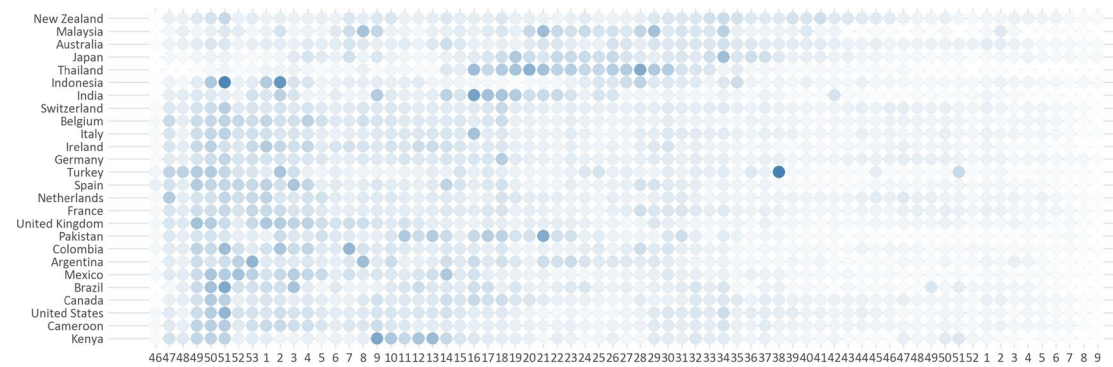

**Figure S2b.** Weekly proportion of tweet count at the country-level.

- Each point in the figure is calculated using the following formula.

$$Proportion = \frac{\text{The number of tweets sent by human in a specific week (in the country/territory)}}{\text{The number of tweets sent by human from November 13,2020 - March 5,2022 (in the country/territory)}}$$

- A point with a deeper colour suggests a higher percentage of tweets are sent during the period.

**Figure S3.** Regional variations in COVID-19 vaccine acceptance, vaccine confidence, information environment, and prevalence of vaccine access-related discourse among Twitter users, November 13, 2020 – March 5, 2022.

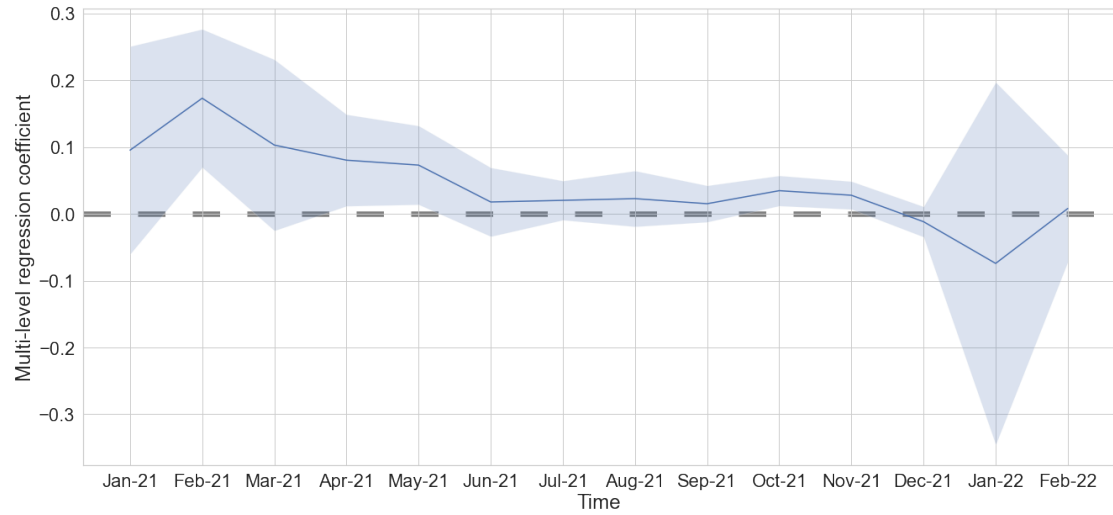

- Each point in the plot represents a country or territory.

**Figure S4.** Multilevel regression coefficients between COVID-19 vaccine acceptance on Twitter and COVID-19 vaccine coverage in each month.

- Countries and territories are grouped according to WHO regions.

**Figure S4a.** COVID-19 vaccine acceptance v.s. monthly coverage

**Figure S4b.** COVID-19 vaccine rejection v.s. monthly coverage

**Table S6.** Association between Twitter users' acceptance and coverage of COVID-19 vaccination across 131 countries and territories

**Table S6a.** Results from univariant linear regressions.

Variables	COVID-19 vaccine coverage			
	Coefficient	95% CI <sup>a</sup>	p-value	R <sup>2</sup>
Intent to accept COVID-19 vaccination	1.007	[0.389,1.625]	0.002	7.5%
Intent to reject COVID-19 vaccination	-1.983	[-3.166,-0.800]	0.001	7.9%

<sup>a</sup> Confidence Interval.

**Table S6b.** Results from multi-level regression analyses.

Variables	COVID-19 vaccine coverage			
	Coefficient	Std.Error	z value	Pr(> z )
<b>Multi-level regression, grouped by WHO regions</b>				
Intent to accept COVID-19 vaccination	0.782	0.242	3.226	0.001
Intent to reject COVID-19 vaccination	-1.223	0.475	-2.576	0.010
<b>Multi-level regression, grouped by World Bank's national income levels</b>				
Intent to accept COVID-19 vaccination	0.929	0.208	4.466	0.000
Intent to reject COVID-19 vaccination	-1.111	0.430	-2.582	0.010

**Figure S5.** Regional weekly-level trends of COVID-19 vaccine acceptance, vaccine confidence, information environment, and prevalence of vaccine access-related discourse among Twitter users, November 13, 2020 – March 5, 2022

- Each point in the figure represents the weekly-level prevalence of a specific category among all Twitter users in a given region.
- A point with a deeper colour suggests that a higher proportion of Twitter users expressed the specific opinion.

**Figure S6.** Weekly-level trends of weighted COVID-19 vaccine acceptance among Twitter users in 26 countries, November 13, 2020 – March 5, 2022

- Only the 26 countries or territories with sufficient Twitter data (total number of Twitter users mentioning COVID-19 vaccination >5000; weekly number >28) were shown.

**Figure S6a.** Weekly-level trends of weighted COVID-19 vaccine acceptance.

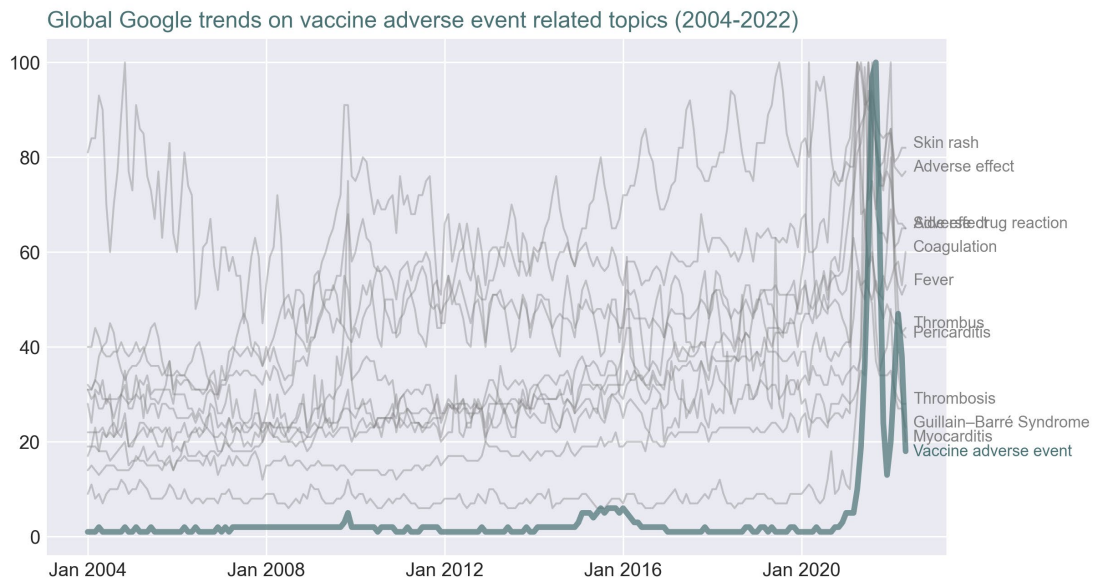

**Figure S6b.** Weekly-level trends of weighted COVID-19 vaccine refusal.

**Figure S7.** Global trends on vaccine adverse event, January 2004 - February 2022

**Figure S8.** Weekly trends of 12 AEFI-related Google Trends topics in 26 countries or territories, November 2020 – February 2022

**Adverse drug reaction**

**Adverse effect**

## Coagulation

## Fever

## Guillain–Barré Syndrome

## Myocarditis

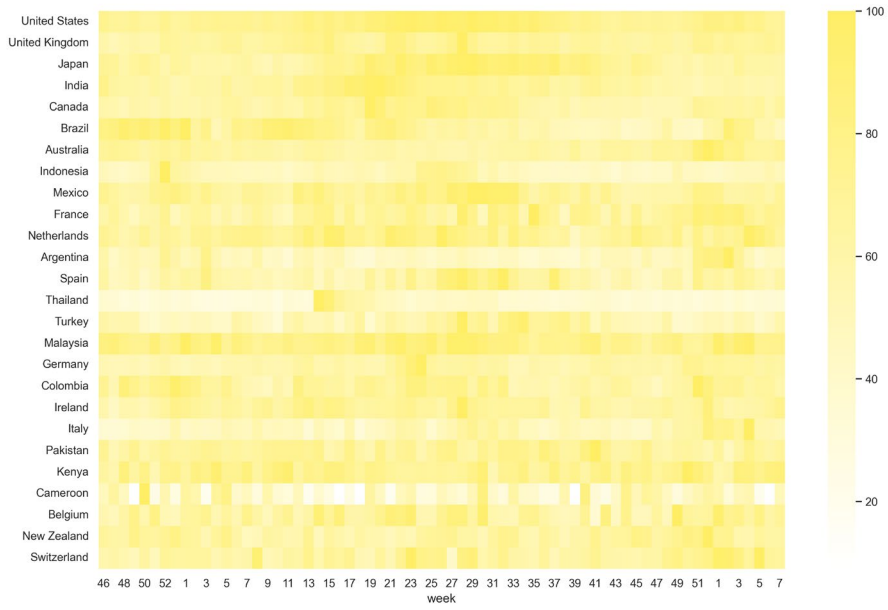

## Pericarditis

## Side effect

## Skin rash

## Thrombosis

## Thrombus

## Vaccine adverse event
