

Title: The effect of acute exercise on circulating microRNAs: A Systematic Review

Search strategy:

1. Search two databases:

PUBMED, sport discuss

Search for the following terms within title/abstract:

- "Exercise" OR "physical activity"
- AND
- "Circulating" OR "plasma" OR "serum" OR "cell-free" OR "cell free" OR "exosome" OR "exosomal" OR "vesicular" OR "extra-cellular vesicle"
- AND
- "miRNA" OR "microRNA" OR "miR"

2. Study selection:

PICO model:

Population	Age: 18-45 yr Healthy: <ul style="list-style-type: none">- BMI < 30 kg/m²- Free from known cardiac disease, metabolic disease or cancer
Intervention	Acute exercise (any duration/modality)
Comparison	Pre and ≤ 48 hr post exercise
Outcome	Circulating miRNA (serum/plasma/exosomes)

Additional criteria:

- Human
- Peer reviewed, published, original research article

Check references of included studies afterwards for relevant articles.

3. Data extraction:

Set out data extraction headings a priori.
