GRADE ASSESSMENT

Outcomes	Nº of studies	Certainty of the evidence (GRADE)
miRNA-1	(14 observational studies)	⊕○○○ Very low ^{a,b,c}
miRNA-133a	(14 observational studies)	⊕○○○ Very low ^{a,b,c}
miRNA-133b	(10 observational studies)	⊕○○○ Very low ^{a,b,c}
miRNA-206	(8 observational studies)	⊕○○○ Very low ^{a,b,c}
miRNA-146	(9 observational studies)	⊕○○○ Very low ^{a,b,c,d}
miRNA-221	(8 observational studies)	⊕○○○ Very low ^{a,b,c}
miRNA-21	(10 observational studies)	⊕○○○ Very low ^{a,b}
miRNA-126	(7 observational studies)	⊕○○○ Very low ^{a,b,c}
miRNA-208	(6 observational studies)	⊕○○○ Very low ^{a,b,c}
miRNA-210	(5 observational studies)	⊕○○○ Very low ^{a,b,c}
miRNA-222	(8 observational studies)	⊕○○○ Very low ^{a,b,c,d}

a. Based on ROBINS-I tool (The proportion of information from studies at high risk of bias is sufficient to affect the interpretation of the results).

b. Was the I^2 greater than 50% and $p < 0.05$ indicating significant heterogeneity.

c. Large 95% confidence intervals and based on influential studies that could change the overall effect size.

d. Based on Funnel Plot and Eggers regression analysis.

Explanations

GRADE Working Group grades of evidence

High certainty: we are very confident that the true effect lies close to that of the estimate of the effect.

Moderate certainty: we are moderately confident in the effect estimate: the true effect is likely to be close to the estimate of the effect, but there is a possibility that it is substantially different.

Low certainty: our confidence in the effect estimate is limited: the true effect may be substantially different from the estimate of the effect.

Very low certainty: we have very little confidence in the effect estimate: the true effect is likely to be substantially different from the estimate of effect.
