

1      **Supplementary figures**  
2  
3  
4

5  
6      **Supplementary Figure 1:** Antigen binding in MPX individuals to different MPXV/VACV  
7      antigens, split according to age group (<50, >=51).  
8  
9

10  
11 **Supplementary figure 2:** P-values of the Pearson correlation matrix. Green indicates a p  
12 value of  $<0.05$ .

13  
14 **Supplementary Figure 3:** P-values for MPXV/VACV antigens to one another in the different  
15 cohorts (negative, Smallpox-vaccinated and MPOX-convalescent). Gree  
16

17  
 18 **Supplementary Figure 4:** Principal component analysis, with mean PCA +/- SEM for each  
 19 group. Simple linear regression (solid black line) was applied for all post-Imvanex vaccination  
 20 samples.  
 21

**Supplementary figure 5:** Correlation of binding between MPXV and VACV protein homologues in MPXV-infected or MVA-vaccinated individuals.

**Supplementary figure 6:** Antibody binding in MPXV-infected individuals aged  $<51$  or  $\geq 51$  to homologous VACV and MPXV antigens.

30 **Supplementary tables**

31 **Supplementary table 1:** Antigens used in this study, the viral source, company, expression  
 32 host, expressed fragment and sequence provided by the manufacturer.
