Case series and reports

In the United States and many other countries, the regulatory framework during the COVID-19 pandemic enabled broad access to COVID-19 convalescent plasma. In this context, a large number of single-arm studies evaluated the risk of death from COVID-19 after transfusion with convalescent plasma, including over 300 case series or case reports.¹⁻³³⁵ The case series and case reports treated 135,949 participants with COVID-19 convalescent plasma and mortality was observed in 33,771 participants (~25% mortality rate). Mortality results associated with case series and reports are provided in [eTable6](#).

Source	Deaths/patients randomised (%)		Ratio of death rates, OR (95% CI)	Weight
	Convalescent plasma group	Usual care group		
Al Harthi et al, ⁶³ 2021	3/41 (7%)	0/61 (0%)	12.66 (1.23-130.22)	0.54%
Liao et al, ⁹⁵ 2021	3/7 (43%)	0/6 (0%)	9.29 (0.77-111.62)	0.49%
Koirala et al, ⁹⁰ 2021	88/173 (51%)	146/910 (16%)	7.80 (5.26-11.57)	2.01%
Garcia-Muñoz et al, ⁸¹ 2021	1/26 (4%)	0/20 (0%)	5.87 (0.11-305.80)	0.22%
Arnold Egloff et al, ⁶⁸ 2021	505/4337 (12%)	478/10687 (5%)	3.23 (2.80-3.73)	2.16%

Sullivan et al, ¹³² 2022	0/592 (0%)	3/589 (1%)	0.13 (0.01-1.29)	18.9%
Total	8/1411 (1%)	11/1416 (1%)	0.60 (0.16-2.28)	

Heterogeneity: $\tau^2 = 1.094$; $\chi^2 = 7.87$ (df=4; $P = .10$); $I^2 = 49\%$

Shoham et al,¹³¹ 2022 not listed because no mortalities were observed in either group. Aleman et al,¹²⁹ 2022 used methylene blue treated plasma and there are concerns whether that could have affected antibody function. Different size symbols represent relative weights used in meta-analysis and are proportional to study size and study variance. Abbreviations: CCP, COVID-19 convalescent plasma; CI, confidence interval.

eFigure 2. Forest plot of mortality among outpatients with recent SARS-CoV-2 exposure or infection in randomized clinical trials.

eTable 1. PRISMA 2020 Checklist.

Section and Topic	Item #	Checklist item	Location where item is reported
TITLE			
Title	1	Identify the report as a systematic review.	Title page
ABSTRACT			
Abstract	2	See the PRISMA 2020 for Abstracts checklist.	Structured Abstract
INTRODUCTION			
Rationale	3	Describe the rationale for the review in the context of existing knowledge.	Introduction
Objectives	4	Provide an explicit statement of the objective(s) or question(s) the review addresses.	Introduction
METHODS			
Eligibility criteria	5	Specify the inclusion and exclusion criteria for the review and how studies were grouped for the syntheses.	Eligibility Criteria
Information sources	6	Specify all databases, registers, websites, organisations, reference lists and other sources searched or consulted to identify studies. Specify the date when each source was last searched or consulted.	Information Sources
Search strategy	7	Present the full search strategies for all databases, registers and websites, including any filters and limits used.	Information Sources
Selection process	8	Specify the methods used to decide whether a study met the inclusion criteria of the review, including how many reviewers screened each record and each report retrieved, whether they worked independently, and if applicable, details of automation tools used in the process.	Selection and Data Collection Processes
Data collection process	9	Specify the methods used to collect data from reports, including how many reviewers collected data from each report, whether they worked independently, any processes for obtaining or confirming data from study investigators, and if applicable, details of automation tools used in the process.	Selection and Data Collection Processes
Data items	10a	List and define all outcomes for which data were sought. Specify whether all results that were compatible with each outcome domain in each study were sought (e.g. for all measures, time points, analyses), and if not, the methods used to decide which results to collect.	Selection and Data Collection Processes
	10b	List and define all other variables for which data were sought (e.g. participant and intervention characteristics, funding sources). Describe any assumptions made about any missing or unclear information.	Selection and Data Collection Processes
Study risk of bias assessment	11	Specify the methods used to assess risk of bias in the included studies, including details of the tool(s) used, how many reviewers assessed each study and whether they worked independently, and if applicable, details of automation tools used in the process.	Study Risk of Bias Assessment
Effect measures	12	Specify for each outcome the effect measure(s) (e.g. risk ratio, mean difference) used in the synthesis or presentation of results.	Statistical Analysis
Synthesis methods	13a	Describe the processes used to decide which studies were eligible for each synthesis (e.g. tabulating the study intervention characteristics and comparing against the planned groups for each synthesis (item #5)).	Statistical Analysis
	13b	Describe any methods required to prepare the data for presentation or synthesis, such as handling of missing summary statistics, or data	Statistical

Section and Topic	Item #	Checklist item	Location where item is reported
		conversions.	Analysis
	13c	Describe any methods used to tabulate or visually display results of individual studies and syntheses.	Statistical Analysis
	13d	Describe any methods used to synthesize results and provide a rationale for the choice(s). If meta-analysis was performed, describe the model(s), method(s) to identify the presence and extent of statistical heterogeneity, and software package(s) used.	Statistical Analysis
	13e	Describe any methods used to explore possible causes of heterogeneity among study results (e.g. subgroup analysis, meta-regression).	Statistical Analysis
	13f	Describe any sensitivity analyses conducted to assess robustness of the synthesized results.	Statistical Analysis
Reporting bias assessment	14	Describe any methods used to assess risk of bias due to missing results in a synthesis (arising from reporting biases).	Risk Assessment
Certainty assessment	15	Describe any methods used to assess certainty (or confidence) in the body of evidence for an outcome.	Risk Assessment
RESULTS			
Study selection	16a	Describe the results of the search and selection process, from the number of records identified in the search to the number of studies included in the review, ideally using a flow diagram.	Figure 1
	16b	Cite studies that might appear to meet the inclusion criteria, but which were excluded, and explain why they were excluded.	Figure 1
Study characteristics	17	Cite each included study and present its characteristics.	Figure 2; eFigure1; eTable6
Risk of bias in studies	18	Present assessments of risk of bias for each included study.	eTable2; eTable3
Results of individual studies	19	For all outcomes, present, for each study: (a) summary statistics for each group (where appropriate) and (b) an effect estimate and its precision (e.g. confidence/credible interval), ideally using structured tables or plots.	Figures 2-5; eFigures 1 & 2
Results of syntheses	20a	For each synthesis, briefly summarise the characteristics and risk of bias among contributing studies.	Risk Assessment
	20b	Present results of all statistical syntheses conducted. If meta-analysis was done, present for each the summary estimate and its precision (e.g. confidence/credible interval) and measures of statistical heterogeneity. If comparing groups, describe the direction of the effect.	Results
	20c	Present results of all investigations of possible causes of heterogeneity among study results.	Results
	20d	Present results of all sensitivity analyses conducted to assess the robustness of the synthesized results.	Results
Reporting biases	21	Present assessments of risk of bias due to missing results (arising from reporting biases) for each synthesis assessed.	Results
Certainty of evidence	22	Present assessments of certainty (or confidence) in the body of evidence for each outcome assessed.	Results
DISCUSSION			
Discussion	23a	Provide a general interpretation of the results in the context of other evidence.	Discussion
	23b	Discuss any limitations of the evidence included in the review.	Limitations
	23c	Discuss any limitations of the review processes used.	Limitations

Section and Topic	Item #	Checklist item	Location where item is reported
	23d	Discuss implications of the results for practice, policy, and future research.	Conclusion
OTHER INFORMATION			
Registration and protocol	24a	Provide registration information for the review, including register name and registration number, or state that the review was not registered.	Methods
	24b	Indicate where the review protocol can be accessed, or state that a protocol was not prepared.	Methods
	24c	Describe and explain any amendments to information provided at registration or in the protocol.	Methods
Support	25	Describe sources of financial or non-financial support for the review, and the role of the funders or sponsors in the review.	Article Information
Competing interests	26	Declare any competing interests of review authors.	Article Information
Availability of data, code and other materials	27	Report which of the following are publicly available and where they can be found: template data collection forms; data extracted from included studies; data used for all analyses; analytic code; any other materials used in the review.	Article Information

eTable 4. Assay systems and cutpoints used to delineate high and low antibody levels.

Source ^a	Antibody Assay	Notes
Bartelt et al, ²⁹ 2022	On-site SARS-CoV-2 WA1 viral reporter neutralization assay	High, >1:640; Low, 1:160 to 1:640
Belov et al, ³³ 2022	BROAD PRNT	High, >250; Low, <1:250
Cain et al, ⁴⁶ 2022	Allermetrix Inc. Quantitative Assay	High, >8.25; Low, <8.25
Fazeli et al, ⁸² 2022	Euroimmun ELISA	High, >1:320; Low, <1:320
Franchini et al, ⁸⁹ 2022	Inhouse Microneutralization Assay	High, >320; Low, <320
Gachoud et al, ⁹³ 2022	Euroimmun ELISA	High, Vax-Plasma (>8 S/Co); Low, Convalescent Plasma (5 S/Co (median))
González et al, ¹⁰⁵ 2022	Unspecified	High, >1:1600; Low, <1:1600
Hemsinliogu et al, ¹²¹ 2021	Inhouse Microneutralization Assay	High, Concentrated, pooled plasma (32.7 S/Co); Low, Single-donor Plasma (9.21 S/Co)
Joyner et al, ¹⁵² 2021	Ortho-Clinical Diagnostics VITROS CLIA	High, >18.45 S/Co; Low, <4.62 S/Co
Khan et al, ¹⁶¹ 2021	Unspecified	High, 1:160 - 1:320; Low, 1:80 - 1:160
Leon et al, ¹⁷⁹ 2022	DiaSorin LIAISON CLIA	High: Vax-Plasma (5192 AU/mL); Low: Unvaccinated Donor Plasma (107 AU/mL)
Maor et al, ¹⁹⁷ 2020	Euroimmun ELISA	High, >4; Low, <4
Mendoza et al, ⁹⁸ 2021	Sigma-Aldrich SIGMAFAST OPD ELISA	High, >1:1024; Low, <1:1024
Romon et al, ¹⁰⁹ 2021	Ortho-Clinical Diagnostics VITROS CLIA	High, >1:250; Low, <1:250
Sanz et al, ¹¹⁴ 2022	Euroimmun ELISA	High, >7.6; Low, <7.6
