

## Supplementary material: delineation protocol

### Anterior caudate nucleus (left and right)

Orientation of slices	Coronal
Anterior border	Most anterior slice when the caudate nucleus is seen
Posterior border	Last slice on which the anterior commissure is completely visualized
Superior border	White matter
Inferior border	From anterior to posterior: white matter, ventral striatum, white matter
Medial border	White matter
Lateral border	White matter

### Anterior putamen (left and right)

Orientation of slices	Coronal
Anterior border	Most anterior slice when the caudate nucleus is seen
Posterior border	Last slice on which the anterior commissure is completely visualized
Superior border	White matter
Inferior border	White matter
Medial border	From anterior to posterior: internal capsule and ventral striatum, pallidum
Lateral border	White matter

### Ventral striatum (left and right)

The ventral striatum corresponds to the ventro-medial portion of the caudate nucleus and most ventral and medial part of the putamen (Haber, 2003).

Orientation of slices	Coronal
Anterior border	First slice when the inferior part of the caudate nucleus is visible
Posterior border	Last slice on which the anterior commissure is completely visualized
Superior border	Anterior striatum (ventral striatum is always inferior to lateral ventricle)
Inferior border	From anterior to posterior: white matter, anterior commissure

**Co-administration of prism adaptation and methylphenidate needs striatal integrity to alleviate spatial neglect**

Medial border	Lateral ventricle, white matter
Lateral border	White matter

**Posterior caudate nucleus (left and right)**

<b>Orientation of slices</b>	<b>Coronal</b>
Anterior border	Anterior caudate nucleus
Posterior border	Last slice when visible
Superior border	White matter
Inferior border	From anterior to posterior: white matter, thalamus, white matter
Medial border	Lateral ventricle
Lateral border	White matter

**Posterior putamen**

<b>Orientation of slices</b>	<b>Coronal</b>
Anterior border	Anterior putamen
Posterior border	Last slice when visible
Superior border	White matter
Inferior border	White matter
Medial border	From anterior to posterior: white matter, pallidum, white matter
Lateral border	White matter
