

Supplemental Figure 1: Post hoc analysis using Tukey's test to isolate the effect of exam section and difficulty index using all questions. (A) Bar plot of the percentage of accuracy by exam section. The blue square brackets identify the significant differences. The significant contrasts were the following: General Medicine – Glaucoma (estimate 0.424, $p=0.002$), General Medicine - Neuro-Ophthalmology (estimate 0.486, $p<0.001$) and General Medicine - Pathology and Tumors (estimate 0.367, $p=0.029$). **(B)** Predicted percentage of accuracy by difficulty index. Accuracy increased with increasing difficulty index (easier questions).
