SUPPLEMENTARY INFORMATION 1

2 **Supplementary Tables S1-S5**

Table S1. Demographic characteristics of vaccine breakthrough cases compared to controls included in main correlates analysis. 3

4

	Cases (%)	Controls (%)
Total N	32	247
Age (years)		
Median	43	43
Interquartile range	31.5-49	34-53.5
Range	22-72	22-71
Sex		
Female	26 (81.25%)	180 (72.9%)
Male	6 (18.75%)	67 (27.1%)
Ethnicity (self-reported)		
White	26 (81.3%)	175 (70.9%)
Asian	1 (3.1%)	20 (8.1%)
Other	1 (3.1%)	11 (4.5%)
Unreported	4 (12.5%)	41 (16.6%)
BMI (kg/m ²)		
Not obese (<30)	11 (34.4%)	98 (39.7%)
Obese (≥30)	2 (6.3%)	9 (3.6%)
Unreported	19 (59.4%)	140 (56.7%)
Vaccine regimen		
AZD1222	9 (28.1%)	32 (13.0%)
BNT162b2 (short interval ¹)	2 (6.3%)	58 (23.5%)
BNT162b2 (long interval ²)	21 (65.6%)	157 (63.6%)
Infection history		
Naïve	26 (81.25)	147 (59.5%)
Convalescent	6 (18.75%)	100 (40.5%)

5 6

¹Short interval represents 2-5 weeks between first and second dose. ²Long interval represents 6-14 weeks between first and second dose.

Table S2. Number and key characteristics of participants sampled for each 7 8

assay.

Immune	Assay	Group	Number of individuals		
parameter			Cases (total N=32)	Controls (total N=247)

14 Table S5. Details of viruses used for live virus microneutralisation assay.

Lineage	Mutations present in Spike	Source
Ancestral [hCoV19/England/0 2/2020]		Public Health England, UK
Delta	T19R, K77R, G142D, Δ156- 157/R158G,	Prof. Wendy Barclay, Imperial
[MS066352H]	A222V, L452R, T478K, D614G, P681R, D950N	College London, London, UK via the Genotype-to-
		Phenotype National Virology
		Consortium (G2P-UK)

16 Supplementary Figures S1-S4

Figure S1. Flow chart indicating overall design of this study within the PITCH cohort.

- 10 V2 refere to conserve versionation
- 19 V2 refers to second vaccination. V2+28 refers to 28 days after the second vaccine
- dose. V3+7 refers to 7 days after the third vaccine dose. LTFU refers to lost to
- 21 follow-up.

22 Figure S2. Comparison of antibody binding and T cell responses between

23 cases and controls according to infection history, and T cell responses to

24 Delta spike peptide pools between cases and controls, at 28 days after second

25 vaccine dose.

- 26 (A) Ancestral SARS-CoV-2 spike- (S), (B) receptor binding domain- (RBD) and (C)
- 27 nucleoprotein- (N) specific IgG binding titre in cases and controls as measured by
- 28 MSD, according to infection history. Dashed lines represent threshold for positive
- 29 response (SARS-CoV-2 S IgG 1160 AU/mL, RDB IgG 1169 AU/mL, N IgG 3874
- 30 AU/mL). Naïve represents those with no history of prior infection (cases n=26,
- 31 controls n=123). Convalescent (Conv) represents those with a history of infection
- 32 prior to vaccination (cases n=6, controls n=77). All represents summation of Naïve
- and Conv participants (cases n=32, controls n=200). (D) T cell responses to peptide
- pools representing ancestral SARS-CoV-2 S1, (E) S2, (F) total S (summation of S1
- and S2 responses) and **(G)** membrane (M) and nucleoprotein (N) in cases and
- 36 controls as measured by IFNγ ELISpot assay, according to infection history. Naïve
- 37 cases n=22, controls n=114. Conv cases n=2, controls n=77. All cases n=24,
- controls n=191. Values of 0 are replaced with 1 for representation on the logarithmic
- 39 scale. **(H)** T cell responses to peptide pools representing Delta (B1.617.2) SARS-
- 40 CoV-2 S1, (I) S2 and (J) Total Delta S (summation or Delta S1 and S2 responses) in
- 41 a subset of cases (n=9) and controls (n=25), as measured by IFN γ ELISpot assay.
- 42 Orange circles represent cases, blue circles represent controls. Bars represent
- 43 median of each group. Error bars represent interquartile range. Two-tailed p-values
- 44 derived from Mann-Whitney U tests shown above linking lines.

45 Figure S3. Comparison of contribution of CD4+ T cell populations to cytokine

- 46 responses and CD4+ and CD8+ T cell polyfunctionality between cases and
- 47 matched controls at 28 days after second vaccine dose.
- 48 (A) T cell populations responsible for expression of IFNγ, (B) TNF and (C) IL-2,

- 49 calculated by dividing the number of CD4+ cells expressing that cytokine after
- 50 background subtraction, divided by the total number of CD4+ and CD8+ cells
- 51 expressing that cytokine after background subtraction. **(D)** T cell polyfunctionality as
- 52 assessed by combination of expression of IFN γ , IL-2 and TNF cytokines in CD4+
- cells in response to ancestral (WT) spike, **(E)** CD4+ cells in response to Delta spike,
- 54 (F) CD8+ cells in response to WT spike and (G) CD8+ cells in response to Delta
- spike peptide pools. Orange circles represent cases, blue circles represent controls.
- 56 Bars represent median of each group. Error bars represent interquartile range. Two-
- 57 tailed p-values derived from Mann-Whitney U tests shown above linking lines. For
- 58 clarity, only p-values <0.05 shown in (D-G).

59 Figure S4. Gating strategy for intracellular cytokine staining (ICS) assay.

60 Lymphocytes were gated using forward scatter (FSC)-area (A) and side scatter

61 (SSC)-A. FSC-A and FSC-height (H) were then used to identify single cells. Live

62 CD3+ T cells were gated by first excluding dead cells on the basis of exclusion of

63 Live Dead stain (LD-NiR) and then gating on positivity for CD3 PerCP. CD4+ and

64 CD8+ subsets were identified based on staining for CD4 APC and CD8 BV510.

65 Expression of IFNγ, IL-2 and TNF was identified in the CD4+CD8- and CD4-CD8+

66 gates. Representative gating shown for one sample for the negative control (DMSO)

67 and ancestral S (peptide) stimulation conditions.

68 Secondary Author List

69 Crick COVID Immunity Pipeline consortium authors, all affiliated with The Francis 70 Crick Institute, London, UK:
